Information is a valuable asset that can make or break your business. Technological developments in the work place and desire for employees to be able to work flexibly have led to an increase in business demand for cloud services. When information security and cloud security are properly managed, it allows you to operate with confidence. However, many organizations are wary of cloud service due to a variety of security concerns.

As the UK's National Standards Body and founding member of ISO, BSI, a Royal Charter company, founded in 1901 originated the majority of the world's most recognized standards including ISO 9001, ISO 14001 and OHSAS 18001, Information Security, Cloud Computing, Data Protection, and more to help organizations manage risk and address today's business and reputational challenges. With its core business focused on Standards Creation, Certification and Training activities, BSI leads the way in shaping standards that help keep businesses relevant and ahead of emerging issues.

To facilitate the development of the ICT industry, a conference on Information & Cloud Security, Best Practice in Managing Information Security & Mitigating Cloud Security Risk, will be held for participants to have an immediate access to the right solutions to the problems in managing Information Security and how Cloud Security risk can be mitigated.

Co-organizer: CSA cloud security alliance℠   CYBERPORT 數碼港   **Sponsor:** Ribose

Supporting Organization: HKT   Hong Kong 香港科技園 Science & Technology Parks   CKS
