

BSI Software helps Cobham Antenna Systems to achieve continual improvements

“We truly believe that without BSI Business Improvement Software we would have struggled to achieve continual improvements in the safety culture at our sites. It's a trusted, well-supported and robust platform that has proved to be a most effective and necessary tool to support the integration of systems across our multi-disciplinary global organisation.

Our investment has delivered results, and continues to enhance and support our safety, health and environmental management system.

We will continue to utilise the BSI software system to support our ongoing continual improvement strategy. It provides the environment to see this continual improvement with scalability and usability to match our dynamic operational environment.”

Mick Cooper,
Cobham Antenna Systems

Cobham is a leading global technology and services innovator, respected for providing solutions to the most challenging problems, from deep space to the depths of the ocean. With 11,500 employees on five continents, they serve customers and partners in over 100 countries.

They are market leaders in wireless and audio, video, data and satellite communications, defence electronics, air-to-air refuelling, aviation services, life-support and mission equipment.

What challenges did Cobham face?

- The absence of a robust escalation reporting system
- Auditing processes were based on fragmented stand-alone documentation
- Document access and collation lacked coherence.

What did implementation help Cobham Antenna Systems to achieve?

Cobham have been using BSI Business Improvement Software for 5 years thanks to the foresight of Cameron Urquhart, Head of Facilities & Estates, who generated its initial inception into the business.

Core functionality of BSI Business Improvement Software includes:

- the ability to communicate across multiple sites simultaneously with escalatory accountability built into the package
- incident reporting and document control

It has also provided a foundation on which to build maturity into Cobham's 'near miss' reporting system.

Cobham Antenna Systems has developed a credible, globally recognised health, safety & environmental culture that has been catalysed and strengthened by superimposing its systems onto BSI Business Improvement Software.

Three major benefits so far:

- 'Near miss' and safety observation reporting
- A simple-to-use reporting system
- Global ease of access.
