

Need to better manage security risks in your supply chain?

Address areas of greatest concern with ISO 28000

bsi.

...making excellence a habit.™

Give your business the advantage and win new business.

Demonstrate your commitment to delivering systematic security management with ISO 28000. The global transportation of goods has never been so complex, and poses many threats for organizations including theft, terrorism, smuggling, preservation of brand integrity and product safety.

A supply chain security management system combines traditional supply chain management practices with security measures – allowing you to protect your business against these threats. Important aspects of security management include validating supplier credentials, screening cargo and securing cargo transit.

ISO 28000 brings big benefits to companies of all sizes. Confidence, consistency, a market advantage and more business can come with an ISO 28000 Security Management System as more customers require you to demonstrate your competence. ISO 28000 helps organizations to better assess security risks in their supply chain, manage new threats as they emerge and implement appropriate controls to manage potential security threats.

Benefits of implementing an ISO 28000 Supply Chain Security Management System include:

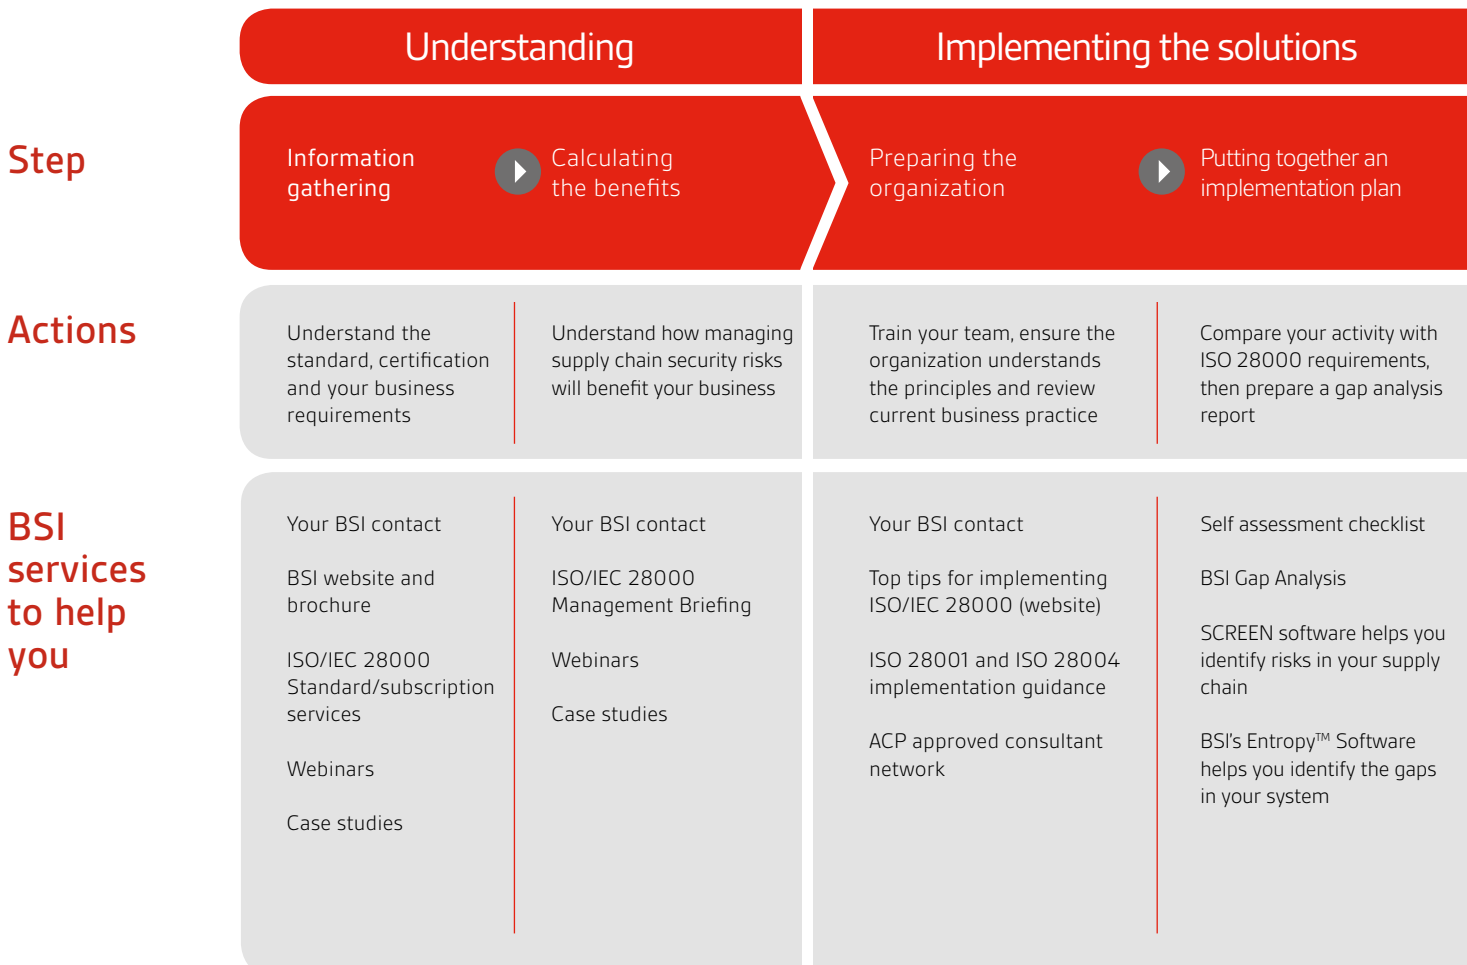

With the growth of international commerce, it has become harder for countries to manage supply chain security on their own. ISO 28000 helps by providing the basis for an overarching security management system, delivering confidence, consistency and a market advantage to your business.

With an ISO 28000 Security Management System the rewards can be significant. Not only will your organization be able to better assess the security of your supply chain and operational environment, you'll also stand apart from your competitors and protect your brand.

Whether you're new to ISO 28000 and supply chain security management or looking to take your expertise further, we have resources and services to suit your needs. We offer service packages that can be customized to support your business and its ambition's.
