

Foundations of ISO 50001 Energy Management System

Course Description :

Know much about energy management? You might be experienced at working with or auditing management systems such as ISO 9001 or ISO 14001, but do you understand energy management well enough to fulfill your ISO 50001 role? In this 2 day course, you will learn the key terms, definitions, and concepts of energy management while gaining practical experience through examples, exercises, and case studies. After attending the course, you can apply your energy management knowledge to the implementation, maintenance or auditing of an ISO 50001 Energy Management System.

Course Benefits :

- Enhance your energy management knowledge and skills
- Have the ability to communicate effectively with energy experts about general energy topics, calculations, charts, and statuses
- Feel confident to tackle implementing an ISO 50001 EnMS
- Understand the technical applications of ISO 50001 EnMS auditable items

Learning Objectives :

Upon completion of this training, participants will be able to:

- Apply energy management knowledge to implementing, maintaining or auditing an ISO 50001 EnMS
- Carry out an energy review
- Identify energy saving solutions for common energy applications
- Develop and/or review an energy management improvement plan

Who Should Attend :

- Those interested in improving energy performance and energy efficiency
- Those who want to implement, maintain or audit an ISO 50001 Energy Management System
- Project managers, or members of top management
- Potential internal auditors

Prerequisites :

There are no formal prerequisites for this course. However, there may be recommended reading to help prepare you for the course.

Duration :

2 days.
