➤ ISO 14001:2015 Gap Assessment Service

ISO 14001, the world's most popular environmental management system standard is being revised to ensure it maintains its relevance in today's marketplace. All organizations currently certified to ISO 14001:2004 will need to transition to the new requirements by September 2018.

The new ISO 14001 provides a great opportunity for your organization to review your environmental management system, ensuring it's integrated into the strategic priorities of your organization and adding real value to your business.

A gap assessment, before your formal transition assessment, can provide valuable insight into your progress in meeting the new requirements.

What is a gap assessment?

A transition gap assessment is a pre-assessment where we take a closer look at your transition plan and environmental management system, comparing it with the requirements of ISO 14001:2015.

One of BSI's expert assessors will review your transition plan and how you intend to conform to the new requirements in regards to context of the organization, leadership, risks and opportunities. Our assessor will review your processes, documented information and evidence that you have met the requirements set out in the new standard.

You'll receive a detailed written report that explains the gaps between your current situation and the new standard requirements, identifying further opportunity for improvement, which will save your organization time and money.

As a first step in your transition journey with BSI, a gap assessment can help confirm where your system is already compliant and identify any gaps.

➤ Benefits of gap assessment

- Helps identify any major gaps or weaknesses in your approach to the new standard and your EMS
- Prepares your management team for greater involvement
- Gives your employees time to understand the changes
- Allows you to budget more effectively for the transition, both in terms of resource and money
- Acts as a project management tool for the transition
- Provides focus, saving time and money
- Identifies any risks and opportunities

Book a transition gap assessment now to take advantage of all the business benefits.

➤ Your ISO 14001:2015 Transition Journey

When is the best time to have a gap assessment?

Plan your gap assessment as early in the planning process as possible. This can provide you with valuable insight into the gaps you need to address as well as confirm areas that are already compliant, saving you time and money by eliminating the "guess work."

Additional Services

Through our experience of developing standards and managing thousands of client interactions every year, BSI knows the best practice way of transitioning to a new standard smoothly. Our comprehensive suite of training and support material has been structured to guide you and your organization through the revision process, every step of the way.
