

Leaders in Taximeter test and calibration

BSI Product Services has calibrated every single taximeter used in taxis regulated by the Public Carriage Office in London for over 25 years. That's nearly 1 million meters! Our dedicated, state-of-the-art Taximeter Laboratory provides a full testing and calibration service that can be tailored to meet the most demanding of needs and requirements.

Our UKAS accredited laboratory performs testing to BS EN 50148, involving EMC tests and the necessary requirements, including Type Testing of units by manufacturers, as governed by the Measuring Instruments Directive (2004/22/EC).

The types of test we are able to perform may include:

- Bench testing at various DC voltages
- Environmental conditioning and testing
- Initial fare change audit tests
- Type examination testing
- Client's own testing requirements
- New tariff verification
- EMC testing

Development Expertise

BSI can also assist with your new product development in an "integrated testing partnership", whilst fully considering your time to market requirements too.

BSI's expertise is a major factor in our customers' decision to partner with us. We always maintain our service integrity through full impartiality and confidentiality, meaning you can expect a level of service from BSI that is second to none.

Next Step

No one is better equipped than BSI to partner you in your Taximeter testing requirements. See for yourselves why so many people continue to use our service. Contact our technical experts on:
