Security Standards and Publications from BSI British Standards

- *The average cost of crime per business is over £8,000 per year*
- *1/3 of firms suffered a disruption from trading as a result of crime committed against them*
- *A further 10% has lost business due to crime consequence*
- *A 1/4 of firms have seen insurance costs increase and staff morale is also damaged.*

Source: The British Chambers of Commerce, 2004

Security issues remain top of the political, social, economic and business agenda whether ensuring information is secure, crime is prevented or identity fraud is minimized.

BSI British Standards offers a wide range of Security standards, books and electronic products.

Building Security

BS EN 14383-1:2006 Prevention of crime. Urban planning and building design. Definition of specific terms

This standard covers the terminology used in the series for the "Prevention of crime by urban planning and building design". For some specific terms used in the other parts, dealing with urban planning, dwellings, shops and offices, it provides equivalent terms in three languages, as well as definitions.

Electronic Security – Access Control

BS EN 726 defines the requirements for integrated circuit (IC) cards and card terminals for telecommunication use in Europe. These requirements are to be applied as a European standard to cover multi-application cards used for services available on the public telecommunications networks via card operated terminals provided by the telecommunication industry.

Title	ISBN	Price	Member Price

Electronic Security – CCTV

BS 7958:2005 Closed-circuit television (CCTV). Management and operation. Code of practice

This code of practice gives recommendations for the operation and management of CCTV within a controlled environment, where data that may be offered as evidence is received, stored, reviewed or analyzed.

This code of practice is applicable to CCTV schemes used in public places including:

- Areas where the public are encouraged to enter or have a right to visit, such as town centres, shopping malls, public transport, health, etc.
- Schemes that overlook a public place, such as traffic monitoring schemes
- Private schemes where a camera view includes a partial view of a public place.

The code also provides good practice for all other CCTV schemes.

The Design, Installation, Commissioning and Maintenance of Fire Detection and Fire Alarm Systems. A Guide to BS 5839-1

This newly revised book is the essential guide to BS 5839-1:2002, as amended in December 2004.

It represents the universal 'bible' for those involved in the design, maintenance and use of fire detection and alarm systems in the United Kingdom and covers all essential elements of the code.

BS 7939:1999 Smoke security devices. Code of practice for manufacture, installation and maintenance

Smoke security devices play an important role in reducing the risk of property loss. They are designed to fill the protected area with a dense cloud of smoke in order to reduce visibility to typically less than arm's length.

This code of practice has been drawn up to enable manufacturers, suppliers and installers of smoke security devices to meet minimum standards required for the safety of personnel and the prevention of damage to furniture and equipment in the protected premises. It is intended to be applied in addition to any relevant statutory requirements. This code of practice will encourage and assist the good management of the manufacture, installation and maintenance of such devices, and that insurers, police, fire authorities and clients wishing to use smoke security devices will insist that manufacturers and installers of the devices comply with the recommendations of this code of practice.

BSI Membership

Standards are recognized as a powerful business tool and can define crucial aspects of a company's safety, quality and reliability. They also enable businesses to operate in a global market.

BSI Membership entitles you to have access to an exclusive range of services aimed at helping your business to prosper in the increasingly competitive marketplace.

Services and benefits include:

- 50% off BS hard copy standards
- 50% off the subscription of our flagship database product, British Standards Online (BSOL)
- Free P&P and credit facilities
- Member helpline
- Free subscription to Update Standards and Business Standards magazines
- Free entry in BSI's searchable online Member Directory
- Access to PLUS (Private List Updating Service)
- Discounts on conferences, seminars and workshops.

BS 7273-4:2007 Code of practice for the operation of fire protection measures. Operation of door locking and release mechanisms

BS 7273-4:2007 gives recommendations for the design, installation, commissioning and maintenance of electrical control arrangements for actuation of mechanisms that unlock, release or open doors in the event of fire. It applies to all aspects of the interface between these mechanisms and a fire detection and fire alarm system, including interfaces that incorporate acoustic coupling and radio transmission.

The interface arrangements to which BS 7273-4 applies include any such arrangements that are designed to release, in the event of fire, fire-resisting doors and shutters that are normally held in the open position, or to unlock doors that are normally locked, or to cause powered sliding doors to open.

Electronic Security – Intruder Systems

BS 5979:2000 Code of practice for remote centres receiving signals from security systems

This code of practice gives recommendations for the planning, construction and facilities of manned and unmanned remote centres, and for the operation of alarm receiving centres (ARCs) receiving signals from security systems, e.g. intruder, fire, social and closed circuit television (CCTV).

BS EN 50130-4:1996 Alarm systems. Electromagnetic compatibility. Product family standard: Immunity requirements for components of fire, intruder and social alarm systems

This standard applies to the components of the following alarm systems, intended for use in and around buildings in residential, commercial, light industrial and industrial environments:

- Intruder alarm systems
- Hold-up alarm systems
- Fire detection and fire alarm systems
- Social alarm systems
- CCTV systems, for security applications
- Access control systems, for security applications
- Alarm transmission systems.

The tests and severities to be used are the same for indoor and outdoor applications of fixed, movable and portable equipment.

DD 243:2004 Installation and configuration of intruder alarm systems designed to generate confirmed alarm conditions. Code of practice

DD 243:2004 gives recommendations for the design, installation and configuration of intruder alarm systems (IASs) that incorporate alarm confirmation technology, where such IASs have signalling systems that signal to an alarm receiving centre (ARC) and require a police response.

It includes recommendations intended to minimize the likelihood of false alarms and is intended to be read in conjunction with and supplements the standards given in the document and in particular EN 50131 (as implemented by PD 6662).

PD 6662:2004 Scheme for the application of European Standards for intruder and hold-up alarm systems

This Published Document (PD) describes a scheme which enables intruder and hold-up alarm systems to be installed and maintained in accordance with published European Standards, draft European Standards, and European Technical Specifications.

The scheme described in this PD applies to intruder and hold-up alarm systems with wired interconnections and/or wire-free interconnections. However the scheme does not apply to exterior intruder alarm systems or exterior deterrent systems which are installed in accordance with BS 4737-4.3 and BS 7992 respectively.

Information and IT Security – Data Protection

NEW BSI Data Protection Guide 2007 Annual subscription with regular updates

Every organization in the UK must comply with the Data Protection Act (DPA) 1998

If your customers do not have confidence in your data protection compliance they are likely to go elsewhere.

The BSI Data Protection (DP) Guide 2007 provides the most comprehensive explanation of the eight principles of the DPA available. Structured into three easy-to-use parts the guide also provides detailed guidance on compliance for all your data processing including email, e-commerce, marketing, records management and information security - helping your organization to protect customer and employee privacy.

Part 1: Guide to the DPA

- Introduction to the DPA
- Definitions
- How to comply with the DPA: organizational responsibilities
- Exemptions
- History of privacy laws
- The Data Protection principles
- Notification
- Rights of data subjects
- International data protection
- Powers and duties of the Information Commissioner.

Part 2: Guide to Practical Implementation

- Developing an email policy
- Marketing
- Subject access
- Related legislation
- New technologies.
- Developing an electronic commerce policy
- Data controller and data processor contracts
- Data protection and records management
- Data protection and information security

Part 3: Supporting Documents

- 25 steps to data protection compliance
- Frequently asked questions
- Forms and templates
- Explanation of terms
- Case studies
- List of Statutory Instruments
- Bibliography.

Updates for 2007/08 include:

- European and international legislation
- Security breach notification
- Identification and verification management
- Assessment of compliance
- Amendments to incorporate ISEB examination requirements, e.g. related legislation and the Information Commissioner's CCTV code of practice.
- Sharing of personal data

Data Protection
Online **DP**

NEW BSI Data Protection Guide online

Features and functions of the DP Guide online include:

- Interactive workbooks
- Download and/or print guidance as PDFs
- Easy navigation between documents with links to cross-references and to relevant documents and legislation
- Alerts each time the site is updated
- A fully accessible site, conforming to a minimum of Level AA of W3C guidelines.

A subscription to the BSI Data Protection Guide 2007 will include all three parts in hardcopy, access to the NEW online service when available and regular updates.

BS 7799-3:2006 Information security management systems. Guidelines For information security risk management

BS 7799-3:2006 gives guidance to support the requirements given in BS ISO/IEC 27001. This includes assessing and treating risks, ongoing risk monitoring, risk reviews and re-assessments. Applicable to all organizations,

BS 7799-3:2006 is intended for those business managers and their staff involved in ISMS risk management activities.

The new British Standard BS 7799-3:2006 covers:

- Risk assessment
- Risk treatment
- Management decision making
- Risk re-assessment
- Monitoring and reviewing of risk profile
- Information security risk in the context of corporate governance
- Compliance with other risk based standards and regulations.

Are you ready for a BS ISO/IEC 27001 information security management systems (ISMS) audit?

Ted Humphreys and Angelika Plate

This publication has been completely revised to bring it in line with the 2005 editions of BS ISO/IEC 27002 and BS ISO/IEC 27001. It includes an ISMS process check and a gap analysis workbook.

This Guide is intended primarily for use by organizations seeking to prepare for certification to BS ISO/IEC 27001. For this purpose it is recommended that the pre-certification assessment is best carried out under the supervision of the person responsible for information security in the organization or by internal audit staff. System developers may also find it a useful reference document when considering the security aspects of new systems.

IT Governance Toolkit

Written by business managers for business managers, this CD-ROM and book is an essential resource to be used in all organizations, but especially those with developed internal IT systems and those focused on e-commerce.

The toolkit contains:

- The Manager's Guide to Data Security and BS 7799/ISO 17799 - Third Edition. Alan Calder and Steve Watkins
- A model Information Security policy and a model Statement of Applicability
- A pre-written Information Security manual
- A Business Continuity Plan and a Service Level Agreement template
- 400 pages of fit-for-purpose documentation
- 110 pre-written policies, procedures, templates and guidance
- Enterprise security assessment tool and Gap analysis/7799 Audit tool
- 'What is BS ISO/IEC 17799?' (project staff training slides)
- PDCA and documentation pyramid presentation
- Unique drafting support service and 12 months of automatic updates.

ONLINE SUBSCRIPTION Proteus Compliance™

Proteus Compliance™ is a gap analysis tool used to demonstrate compliance to BS ISO/IEC 17799 and with over 1,100 questions, has three modules to meet the needs of different customers.

1. Proteus Compliance™ for the Consultant

A single user, stand-alone license with single questionnaire aimed at the Consultant as the license permits multiple external engagements.

CONSULTANT

- Online
- BSI order ref BIP 0023

Price £6,000 + VAT per annum including maintenance or £600 per month (min 3 months initial period)

2. Proteus Compliance™ for the SME

A remotely hosted (ASP) package with a single questionnaire and up to five users (one of whom has Compliance Manager administrative rights). To avoid the need to provide suitable hardware this license is remotely hosted and is made available securely over the web. This product can be integrated with other Proteus Enterprise™ modules. Intended for companies requiring a small number of users to work concurrently on completing one or more compliance gap analysis.

SME

- Online
- BSI order ref BIP 0013

Price £2,500 + VAT per annum including maintenance

3. Proteus Compliance™ Lite

A single use, stand-alone license with a cut down BS ISO/IEC 17799 questionnaire (400 question set) aimed at smaller companies and those looking to undertake a quick and simple BS ISO/IEC 17799 gap analysis.

BS ISO/IEC 9798-1:1997 Information technology. Security techniques. Entity authentication mechanisms. General

BS ISO/IEC 9798-1:1997 specifies an authentication model and general requirements and constraints for entity authentication mechanisms which use security techniques. These mechanisms are used to corroborate that an entity is the one that is claimed. An entity to be authenticated proves its identity by showing its knowledge of a secret.

The mechanisms are defined as exchanges of information between entities, and where required, exchanges with a trusted third party.

BS ISO/IEC 9798-3:1998 Information technology. Security techniques. Entity authentication mechanisms. Mechanisms using digital signature techniques

BS ISO/IEC 9798-3:1998 specifies entity authentication mechanisms using digital signatures based on asymmetric techniques. Two mechanisms are concerned with the authentication of a single entity (unilateral authentication), while the remaining are mechanisms for mutual authentication of two entities. A digital signature is used to verify the identity of an entity. A trusted third party may be involved.

BS ISO/IEC 9979:1999 Information technology. Security techniques. Procedures for the registration of cryptographic algorithms

This standard specifies the procedures for the registering of cryptographic algorithms and the form of register entries. It is for use by those wishing to make entries in the register and by the Registration Authority.

The ISO/IEC register of cryptographic algorithms serves as a common reference point for the identification of cryptographic algorithms by a unique name. The register is also a repository of basic parameters identified with the register entry.

The principal purpose of the register is to enable entities to identify and negotiate an agreed cryptographic algorithm.

Information and IT Security – IT Security Techniques

BS ISO/IEC TR 13335-3:1998 Information technology. Guidelines for the management of IT security. Techniques for the management of IT security

BS ISO/IEC TR 13335-3:1998 provides techniques for the management of IT security.

These guidelines are designed to assist the implementation of IT security. Familiarity with the concepts and models introduced in BS ISO/IEC 13335-1 and the material concerning the management and planning of IT security in BS ISO/IEC TR 13335-2 is important for a complete understanding of this part of ISO/IEC TR 13335.

BS ISO/IEC TR 13335-4:2000 Information technology. Guidelines for the management of IT security. Selection of safeguards

BS ISO/IEC TR 13335-4:2000 provides guidance on the selection of safeguards, taking into account business needs and security concerns. It describes a process for the selection of safeguards according to security risks and concerns and the specific environment of an organization. It shows how to achieve appropriate protection, and how this can be supported by the application of baseline security.

BS ISO/IEC TR 13335-5:2001 Information technology. Guidelines for the management of IT security. Management guidance of network security

BS ISO/IEC TR 13335-5:2001 provides guidance with respect to networks and communications to those responsible for the management of IT security. The guidance supports the identification and analysis of the communications related factors that should be taken into account to establish network security requirements.

This standard builds on BS ISO/IEC TR 13335-4 by providing an introduction on how to identify appropriate safeguard areas with respect to security associated with connections to communications networks.

BS ISO/IEC 15408-1:2005 Information technology. Security techniques. Evaluation criteria for IT security. Introduction and general model

This part of BS ISO/IEC 15408-1:2005 defines two forms for expressing IT security functional and assurance requirements. The protection profile (PP) construct allows creation of generalized reusable sets of these security requirements. The PP can be used by prospective consumers for specification and identification of products with IT security features which will meet their needs. The security target (ST) expresses the security requirements and specifies the security functions for a particular product or system to be evaluated, called the target of evaluation (TOE). The ST is used by evaluators as the basis for evaluations conducted in accordance with ISO/IEC 15408.

BS ISO/IEC TR 15947:2002 Information technology. Security techniques. IT intrusion detection framework

This framework explains intrusion detection terms and concepts and describes the relationship among them. Further, the framework addresses possible ordering of intrusion detection tasks and related activities.

It provides the basis for a common understanding of intrusion detection. This material aims to assist IT managers to deploy within their organizations Intrusion Detection Systems (IDS) that interact and work together. This TR should facilitate collaboration among organizations across the world where collaboration is desired and/or essential to counter intrusion attempts.

PD ISO/IEC TR 15446:2004 Information technology. Security techniques. Guide for the production of protection profiles and security targets

This Published Document (PD) provides guidance relating to the construction of Protection Profiles (PPs) and Security Targets (STs) that are intended to be compliant with ISO/IEC 15408 (the 'Common Criteria'). As such, the document is primarily aimed at those who are involved in the development of PPs and STs.

However, it is also likely to be useful to evaluators of PPs and STs and to those who are responsible for monitoring PP and ST evaluation. It may also be of interest to consumers and users of PPs and STs who wish to understand what guidance the PP/ST author used, and which parts of the PP or ST are of principal interest.

BSI British Standards Conferences and Training

BSI British Standards provides a comprehensive range of CPD accredited training courses across a diverse spectrum of subjects in the ICT area, offering practical advice and guidance to help you understand the key issues, get to grips with the relevant standards and learn how they can be implemented and applied to everyday working practices to benefit your business. BSI is also accredited, or works with accredited partners, to provide a range of ISEB professional qualifications.

Relevant, up-to-date and accessible, our training courses are presented by leading experts – enabling you to leave our courses better equipped to face your professional challenges and responsibilities.

Courses are available in the following areas:

- IT Governance
- Information Security
- IT Service Management
- Information Management & Law

Risk

BS 25999-1:2006 Code of practice for business continuity management

BS 25999-1:2006 is a code of practice that takes the form of guidance and recommendations. It establishes the process, principles and terminology of business continuity management (BCM), providing a basis for understanding, developing and implementing business continuity within an organization and to provide confidence in business-to-business and business-to-customer dealings.

In addition to the above, it provides a comprehensive set of controls based on BCM best practice and covers the whole BCM lifecycle.

BS 25999-1:2006 has been developed by practitioners throughout the global community, drawing upon their considerable academic, technical and practical experiences of BCM. It has been produced to provide a system based on good practice for BCM.

PAS 79:2007 Fire Risk Assessment. Guidance and a Recommended Methodology C S Todd & Associates Ltd

This Publicly Available Specification (PAS) gives guidance and corresponding examples of documentation for undertaking, and recording the significant findings of, fire risk assessments in buildings and parts of buildings for which fire risk assessments are required by legislation.

It is not applicable in the case of a single-family private dwelling, or necessarily applicable to buildings during the construction phase. The methodology is intended to provide a structured approach for people with knowledge of the principles of fire safety; it is not intended as a guide to fire safety for non-specialists.

The recommended approach to carrying out fire risk assessments is intended to determine the risk-proportionate fire precautions required to protect building occupants including employees, contractors, visitors and members of the public and to protect people in the immediate vicinity of the building. The fire risk assessment is not necessarily sufficient to address the safety of fire-fighters in the event of a fire in the building.

The recommended methodology is not intended to address protection of property (the building and its contents) or the environment, or to address protection of a business, process or activity against interruption. Buildings with special hazards, with the potential for high risk to life (e.g. chemical or nuclear hazards), will require consideration of additional factors associated with these hazards and their means of control, and are beyond the scope of this document.

BS 25999 Business Continuity Assessment Online

Business Continuity Assessment Online **BS 25999**

To help business turn a standard into practice, BSI has developed a new software self-assessment tool: BS 25999 Business Continuity Assessment Online.

This online tool will help organizations ensure that their own business continuity plans meet and conform to the standards set by BS 25999.

BS 25999 Business Continuity Assessment Online can help you to:

- Understand how to prepare a business continuity plan
- Identify areas for improvement
- Meet regulatory obligations
- Add value to your business by being able to demonstrate good governance
- Increase your chances of winning new business in the corporate arena
- Retain existing clients, especially those that insist on seeing evidence of BCM
- Use a consistent approach to BCM and auditing through your business and your supply chain
- Demonstrate "due diligence" in the event of merger/disposal to secure "best value"
- Benchmark your business continuity planning and actions against similar businesses
- Improve inter- and intra-company communications through regular reporting so that your employees and suppliers are informed of all compliance and risk issues.

NEW ONLINE SUBSCRIPTION TOOL

- Online subscription • 2007
- Published by BSI • BSI order ref BIP 5001

Price £225* + VAT, Member Price £180 + VAT

This price entitles one user (one user ID and password) to unlimited use of BS 25999 Business Continuity Assessment Tool for one year.

A Risk Management Approach to Business Continuity: Aligning Business Continuity with Corporate Governance *Julia Graham and David Kaye*

This book looks at the concepts of risk management and business continuity management from a holistic approach, and encourages organizations to go deeper when developing business continuity plans to see it as an opportunity for growth, not just a survival plan. It will be a useful tool for risk managers and continuity managers, and of broader interest to all senior management.

BS EN 1143-2:2001 Secure storage units. Requirements, classification and methods of test for resistance to burglary. Deposit systems

BS EN 1143-2:2001 specifies requirements and tests for deposit systems, and classifies the systems according to their burglary resistance and their resistance to the theft of deposits.

The standard includes design requirements for deposit systems controlled by programmable controllers. In this standard, controller hardware testing is restricted to electric motors, sensors, coils and similar devices; software testing is not part of this standard.
