

## PAS Development Process - Stages

The diagram above provides an overview of the main stages of the PAS development process and an indicative timeframe for each of these key phases.

BSI will independently lead the PAS development process. The normal BSI standards development process will be enhanced by additional review stages. This process expansion allows for even greater scrutiny of the technical content that will go into the standard.

In addition, working groups providing further technical input to the development of the PAS will run concurrently with the PAS development process. These additional stages will run in parallel to BSI's standard project stages or complement them, and do not alter the standard process which BSI deploys in the development of standards.
