Need to better manage security risks in your supply chain?

Address areas of greatest concern with ISO 28000
Give your business the advantage and win new business.

Demonstrate your commitment to delivering systematic security management with ISO 28000. The global transportation of goods has never been so complex, and poses many threats for organizations including theft, terrorism, smuggling, preservation of brand integrity and product safety.

A supply chain security management system combines traditional supply chain management practices with security measures – allowing you to protect your business against these threats. Important aspects of security management include validating supplier credentials, screening cargo and securing cargo transit.

ISO 28000 brings big benefits to companies of all sizes. Confidence, consistency, a market advantage and more business can come with an ISO 28000 Security Management System as more customers require you to demonstrate your competence. ISO 28000 helps organizations to better assess security risks in their supply chain, manage new threats as they emerge and implement appropriate controls to manage potential security threats.

Benefits of implementing an ISO 28000 Supply Chain Security Management System include:

- **Financial performance**
  - Allows management to focus finite resources in areas of greatest concern
  - Achieve cost savings through a reduction in security incidents and potential reduction in corporate insurance premiums

- **Corporate reputation**
  - Reassure stakeholders of your organization’s commitment to the safety of individuals and security of goods and services

- **Marketing advantage**
  - Get a competitive advantage and win new business

- **Operational improvements**
  - Facilitate trade and expedite the transport of goods across borders
  - Benchmark your organization’s security management practices with international best practice
  - Gain opportunities to improve efficiency across working practices

- **Risk management**
  - Monitor and manage security risks throughout your business and supply chain
  - Encourage companies to secure their own processes within supply chains
Give your business the advantage and win new business.

Demonstrate your commitment to delivering systematic security management with ISO 28000. The global transportation of goods has never been so complex, and poses many threats for organizations including theft, terrorism, smuggling, preservation of brand integrity and product safety. ISO 28000 brings big benefits to companies of all sizes. Confidence, consistency, a market advantage and more business can come with an ISO 28000 Security Management System. Customers require you to demonstrate your competence. ISO 28000 helps organizations to better assess security risk, establish security management practices and manage their supply chain security risks, as they emerge and manage appropriate controls to manage potential security threats.

ISO 28000 Management System

Benefits of implementing an ISO 28000 Supply Chain Security Management System include:

- Financial performance: Show management to those in your business who are monitoring your company and operate your corporate insurance providers.
- Corporate reputation: Demonstrate your company’s commitment to the safety of individuals and security of the environment, you’ll also stand apart from your competitors and win new business.
- Marketing advantage: Get a competitive advantage and set your business apart.
- Operational improvements: Reduce risk and improve the transport of goods and services to suit your needs. We offer service packages that can be customized to support your business.

With the growth of international commerce, it has become harder for countries to manage supply chain security on their own. ISO 28000 helps by providing the basis for an overarching security management system, delivering confidence, consistency and a market advantage to your business.
