Concerned about road safety?

BS ISO 39001 will help you save lives.
Our range of effective risk management solutions means your organization can turn threats into opportunities:

1. For more than a century we have been challenging complacency to help our clients perform better, reduce risk and achieve sustainable growth.

2. BSI pioneered standards to support better risk management including Occupational Health & Safety (BS OHSAS 18001), Information Security (ISO/IEC 27001) and Business Continuity Management (ISO 22301).

3. You can enjoy the benefits of working with BSI teams who have a wealth of experience helping businesses embed risk management in an array of different sectors. They can help you understand the challenges and share their knowledge.

4. We provide end-to-end support, helping you monitor and maintain your excellence through our proprietary software and compliance tools so that you can confidently introduce BS ISO 39001 into your organization.

5. We talk with, and listen to clients like you every day, asking them what they want and how satisfied they are with our products and services. This way we can make sure we are responding to the needs of our clients as they arise.

6. BSI invests heavily in recruiting and developing the best assessors, who scored on average 9.2/10 in our Global Client Satisfaction Survey.
Let BS ISO 39001 signpost the way to better road safety management

With road traffic accidents predicted to be the world’s fifth largest cause of death by 2030, reducing fatalities and serious injury on the roads is of paramount importance. The United Nation’s ‘Decade of Action for Road Safety’ aims to prevent five million road deaths globally by 2020.

By adopting the best-practice management framework set out in BS ISO 39001, you can actively contribute to reducing the risk of death and serious injury from road traffic in areas within your sphere of influence. This will help you save lives, support your social responsibility programme, improve your road traffic safety results beyond mere compliance and subsequently, reduce accident-related costs and downtime.

BS ISO 39001 is an invaluable tool for any organization needing to recognize the benefits of implementing an occupational road safety management system, both for itself and the wider society.

Who would benefit from BS ISO 39001?

Let BS ISO 39001 signpost the way to better road safety management

With road traffic accidents predicted to be the world's fifth largest cause of death by 2030, reducing fatalities and serious injury on the roads is of paramount importance. The United Nations' Decade of Action for Road Safety aims to prevent five million road deaths globally by 2020.

Who would benefit from BS ISO 39001?

Whether you're new to BS ISO 39001, building on an existing occupational health and safety system or looking to take your expertise further, we have the right training courses, resources and services for you. We offer service packages that can be customized to your business to support your road traffic safety management ambitions.

“Any company committed to improving its road safety will benefit from the introduction of BS ISO 39001, but so will every other road user as the approach will make our roads safer for all who use them.”

Kevin Cook, Group Health and Safety Director, Mark Group

With an effective system in place, BSI can help you to develop a holistic Safe System approach to managing road traffic risks that can bring together existing road traffic safety initiatives. Based on international expertise the framework is applicable worldwide and will enable you to reduce your organization's road risks, bringing many business benefits of improved efficiency, reputation protection and access to new tender opportunities.

By adopting the best-practice management framework set out in BS ISO 39001, you can actively contribute to reducing the risk of death and serious injury from road traffic in areas within your sphere of influence. This will help you save lives, support your social responsibilities and ensure your organization benefits from improved public perception. This will help you save lives, support your social responsibilities and ensure your organization benefits from improved public perception.

BS ISO 39001 is a valuable tool for any organization needing to better manage road traffic safety. It offers benefits beyond mere compliance and subsequently, reduce accident-related costs and diversity.
