

If trade is interrupted, SCREEN
keeps the information flowing.

Stay informed 24/7 with online, real-time
data and intelligence to protect your supply
chain from security risks and threats.

Instant intelligence – your best weapon to counteract supply chain risk and disruption.

SCREEN stands for Supply Chain Risk Exposure Evaluation Network. To you, it crucially stands for business continuity and risk mitigation. It gives you web-based, real-time trade interruption updates and news feeds on supply chain security-related incidents worldwide. You will also have exclusive access to special BSI reports on major disruption incidents, countermeasure programmes and risk mitigation best practices, as well as access to specific country information with downloads that focus on supply chain terrorism, cargo disruption and political climates.

Reviews available to subscribers

Cargo disruption

- Cargo disruption threat-level ratings for 212 countries.
- BSI maintains an active, proprietary database of cargo disruption and loss rates spanning over 10 years incorporating incidents affecting over \$10 trillion dollars worth of cargo movement. This database enables BSI to assess supply chain security by quantifying cargo tampering and unmanifested cargo risk at the country level.

Supply chain terrorism

- Intelligence, analysis, and associated threat levels related to anti-western terrorism risk in 212 countries.
- Reports include detailed profiles and threat levels for over 250 active terrorist groups with ideologies that specifically target Western interests and commerce.

Business and political climate

- In-depth country-specific supply chain security data.
- Categories include:
 - Population and Culture
 - Economy and Trade Transportation Infrastructure
 - General Governance
 - Export Control Governance
 - Employer Security Practices
 - Customs-Trade Supply Chain Security Programmes.

Proven to make the grade

Since 2008, BSI has been providing customs and supply chain Global Risk Analysis and Data Evaluation (GRADE). This intelligence includes:

- Anti-western terrorism exposure
- Cargo disruptions such as theft, hijacking and piracy
- Unmanifested cargo introduction (drug introduction, stowaways)
- Transportation modality exposure
- The same intelligence will be used by both new centres of excellence and expertise.

As a further endorsement, our intelligence is used in over 40 countries by Customs Attaché officers, as well as over 80% of Authorized Economic Operator (AEO) countries (including Japan). SCREEN is the most complete, publically available Supply Chain Security, Corporate Social Responsibility (CSR) and Environmental intelligence and analysis resource.

- Cargo Disruption
- Supply Chain Terrorism
- Corporate Social Responsibility
- Human Rights
- Environmental.

Unique markets need unique risk analysis

Country-specific risk profiles

Evaluating country and supply chain specific risks is critical. Every market is unique: socio-economic factors, governance, legal and regulatory frameworks, investment incentive structures, financial and trade support services, language, culture, and consumer preferences can be radically different from country to country. By definition, security risks in diverse environments will also differ widely. SCREEN data sets include unique, proprietary risk data and BSI-generated analysis related to global Supply Chain Security, CSR and Environmental risk exposure as well as trade and compliance information.

Country-specific risk reports

Accurate predictions of risk are essential when managing a complex global supply chain. SCREEN provides users with 'Country Heat' maps that show a forecast or warning of the current predicted status. They help you avoid the hotspots and implement greater controls if you need to enter these higher risk areas.

"BSI has in-country personnel in over 100 countries."

Which would you rather do?

Struggle to gather risk intelligence from multiple sources? Or subscribe to a single intelligence repository that gives you high-level, location-specific, risk views?

Your business is only as good as your supply chain: Put its future in safe hands.

BSI is trusted as a leader in global risk management, with proven expertise and an extensive network of worldwide supply chain specialists who are well placed to help you mitigate risks. This means the risks you are aware of and, just as crucially, the ones you don't yet know about. As well as our network of experts, we provide companies with a sophisticated range of supply chain security applications. It is the combined power of our applications and network that gives us a unique global reach and effectiveness, and that gives our clients the reassurance of:

- **65 offices worldwide**
- **70,000 customer locations**
- **2,000 standards issued each year**
- **Over 150,000 audit days performed each year**
- **More than 67,000 students trained in 2012**
- **Thousands of licensed software locations**
- **Supply chain risk intelligence covering over 200 countries**

SCREEN – Intelligence & Risk Analysis

BSI is the one source used globally for supply chain and cargo risk intelligence. 24/7 instant online access to secure, up-to-date country supply chain risk analysis data and intelligence based on anti-western terrorism activity, cargo disruptions, government and demographic data and other intuitive supply chain security indicators.
