Total possible: 60

50 to 60 – You have a solid understanding of the importance of safety in your organization.
40 to 50 – You are well on your way to creating a safety culture in your organization.
30 to 40 – Your employees and your organization are at somewhat of a risk
0 to 30 – Your organization is at risk

ISO 45001 was created to address the global need to improve work related health and safety of workers –
over two million of whom die each year from work-related incidents and an even higher number from
occupational health issues.

ISO 45001 specifies requirements for creating an occupational health and safety (OH&S) management system,
with interpretation guidance to enable an organization to improve OH&S performance in the workplace. The
requirements in the standard are applicable to all organizations, irrespective of its size, activities.

BSI can help you standardize your policies and procedures for Occupation Health & Safety with the new
international standard, ISO 45001.
