BSI Training Academy

IATF 16949:2016 **Transition** training course

Essential information about the course

Level **1 2**

The globally recognized quality management standard for the automotive industry, ISO/TS 16949, is changing. It is being replaced by IATF 16949:2016 which is published by the International Automotive Task Force (IATF). Organizations currently certified will need to transition to the new standard by 14 September 2018.

If you need to make the transition to the updated standard then our two-day Transition Training Course will help you to explore the changes and so that you are well-placed to start your transition journey. Once you have attended this course you will be able to identify gaps in your current Automotive Quality Management Standard will which help you to plan the process.

"Our company learns something new each audit. I was very impressed with the auditor's knowledge and expertise. They express the standard in terms we could all understand." Truck-Lite Co. LLC, US-based vehicle lighting manufacturer

Our full course agenda helps you understand what to expect:

Day 1
