Privacy Assessment Coverage Engine (PACE)

Assess your organization's data use against privacy regulations and best practice

About PACE

PACE is an automated, self-assessment, SaaS-based profiling and reporting solution for organizations of all sizes, helping data guardians assess and improve current data use activity in line with privacy requirements and best practice.

Easy,
efficient and
scalable

PACE helps organizations meet requirements of emerging data protection regulations such as the EU's General Data Protection Regulation (GDPR).

Privacy Assessment Coverage Engine (PACE) software

Features

Assess any project, data flow or overall governance activity against key requirements

Supports long and short privacy self-assessment options, covering all typical data processing scenarios found in organizations of all sizes. PACE also supports collaboration on these assessments across projects, individuals and teams.

Get GDPR ready

PACE has been built and configured with GDPR compliance in mind, with core regulatory gap requirements tested in all assessments. Choose from multiple GDPR profile dashboards and reporting outputs depending on necessary assessment detail.

Align with best practice standards and frameworks

Assessment results have been aligned against key privacy and data protection standards including ISO 29100 and ISO 27000. Security elements of PACE assessments have also been developed with the requirements of the ISO 27000 global information security standard.

Automated dashboards and reports for quick-win insights with minimal effort

Assessments are supported by several automated analysis and scoring features, providing easy to interpret profiles of privacy coverage and compliance risk. Drill down from summary dashboards to detailed reports and then easily share these with project stakeholders.

Operationalize privacy assessments across your enterprise

Supports efficient organization-wide privacy-by-design and provides a consistent basis for Privacy Impact Assessments (PIAs) of high-risk data processing activities - both key requirements of GDPR. Develop project assessment teams, manage multiple assessment and support manual assessment activities with quick-win insights.

Who should use BSI PACE

- Privacy managers, leaders, champions
- Project managers and data protection leaders
- Privacy experts and consultants
- Entrepreneurs and small organizations looking to achieve compliance
- IT and information security professionals
