

Fire Fighting Equipment

Certify your fire fighting equipment with BSI and get the stamp of quality.

BSI offers a full range of testing and certification services to help you bring your products to market in Australia & New Zealand, and around the world. From research and development, pre-production, prototype, batch and audit to full compliance testing, we have the expertise and experience to help you at every step of your journey.

We have one of the widest testing and certification capabilities in the world and our product certification marks in fire fighting are recognised globally. Our Benchmark and Kitemark certifications will give you access to markets in Australia and New Zealand, and as a Notified Body for CE marking compliance we'll help you bring your product to the European market.

We're also member of the Fire Protection Association Australia (FPAA), the peak technical and educational safety organisation in Australia, meaning we're fully updated on the industry and any potential changes.

BSI can offer certification to the Australian and New Zealand standards listed below, as well as additional services including on-site witness testing.

Portable fire fighting equipment

- **AS/NZS 1841.1 Portable fire extinguishers – General requirements**
Portable fire extinguishers can be water, wet chemical, foam, powder, carbon dioxide or vaporising liquid type.
- **AS/NZS 3504 Fire blankets**
In most instances fire blankets are used to extinguish flames in kitchen environments. However, they are also an effective method of smothering fire on a person, for example, if their clothing should catch light during a fire incident.
- **AS/NZS 4353 Portable fire extinguishers - Aerosol type**

Fixed fire systems

- **AS 2792 Fire hose - Delivery layflat**
Layflat fire hoses are used by firefighters worldwide and are probably the most important piece of equipment on a fire appliance. All fire hoses with Benchmark certification will conform with construction, dimension, weight, burst pressure, adhesion, moisture absorption, flexibility, heat ageing, abrasion resistance and ozone resistance requirements of the standards.
- **AS/NZS 1221 Fire hose reels**
Hose reels can both be fixed in a permanent location or portable and attached to a truck, trailer, or cart.
- **AS 2419.1 Fire hydrant installations - System design, installation and commissioning**
- **AS 2419.2 Fire hydrant installations - Part 2: Fire hydrant valves**
- **AS 2419.3 Fire hydrant installations - Part 3: Fire brigade booster connections**

In addition to Benchmark certification on the above standards, stand alone CE marking is offered on BS EN 14339 Underground fire hydrants. Testing can be undertaken either on-site or at BSI's extensive test facilities. This can be further complemented with full compliance testing against the Construction Products Directive (CPD).
