

Implementing ISO 50001 Energy Management System

Course Description :

Using a step-by-step process, this two-day course provides guidance on how to implement an ISO 50001 energy management system. You will learn how to establish your own systems and processes that will reduce your energy costs, cut your environmental impact and boost your reputation. Following the course you will have the expertise to define, plan, implement and maintain an energy management system based on ISO 50001.

You will also learn how to get management buy-in, build awareness, identify targets, and prepare project plans. Hands-on exercises and a take-home toolkit will help you learn effectively, while providing a valuable reference for your implementation process. The course will also discuss integrating ISO 50001 with other management systems, like ISO 14001.

Course Structure :

This course includes a high level of interactivity during presentations on:

- Understand ISO 50001 requirements
- Identify the resources needed to implement ISO 50001
- Define, plan and implement a ISO 50001 energy management system
- Develop energy policies, processes, targets and measuring techniques

Who Should Attend :

- Those interested in improving energy performance and energy efficiency
- Those who want to implement an ISO 50001 EnMS
- Energy managers (management representatives, plant managers, facility managers), energy coordinators (process owners, engineers).

Duration :

2 days.
