# Improve the quality of your service delivery with **ISO/IEC 20000-1**

“ISO/IEC 20000 sends a powerful message that we have the processes to cover the design, transition, delivery and improvement of services that fulfil our clients’ requirements. It helps us stand out.”

Leading UK-based telecommunications provider

- Preparing for the revision

# Introduction

In today's dynamic business environment, service delivery continues to evolve and advance, presenting new opportunities and challenges for business. As service providers, it is important to not only make sure the appropriate services are delivered, but that they adapt and align with business objectives.

The update to ISO/IEC 20000-1 aims to provide a clear set of best practice requirements to help organizations deliver consistent and robust services that continue to evolve with the demands of users. The anticipated benefits of the revised ISO/IEC 20000-1 standard include:

## **Bringing service management and service delivery into the heart of your business**

The updated standard will ensure that service management is integrated and aligned with the business strategies of your organization. This strategic focus will result in optimizing the performance of your service management system (SMS), making it more effective for you and your customers.

## **Tracking the changing trends in service management**

Service management and service delivery are changing constantly. The international standard needs to evolve to allow today and tomorrow's trends to still be applicable to ISO/IEC 20000. The standard has been updated in several ways to do this.

The requirements now concentrate on what to do and not how to do it. This will make it easier to use different methods with ISO/IEC 20000 such as ITIL, Devops, Agile, Lean, SIAM, VeriSM.

The commoditization of services means that it's not always possible, or desirable, to agree some items with customers. For example, agreeing a definition of an emergency change. Therefore, some changes have been made to requirements to allow for commodity services.

## **Less prescriptive documentation**

Feedback has suggested the current standard may be too prescriptive around documentation and procedures. The update has reduced the requirements for documentation and procedures which will provide greater flexibility, making it easier to apply to any service management system.

## **Enabling integration of management systems**

It will adopt the new high-level structure applicable to all new ISO management systems standards, making it much easier to implement an integrated management system. The most commonly seen integrations with ISO/IEC 20000-1 are with ISO 9001, quality, and ISO/IEC 27001, information security.

## **Allowing a smooth transition from the 2011 edition to the revised edition**

The effort and investment in your existing service management system is not wasted. There is a clear transition path. There are some new requirements, a few simplified requirements and many of the existing requirements remain.

# About this guide

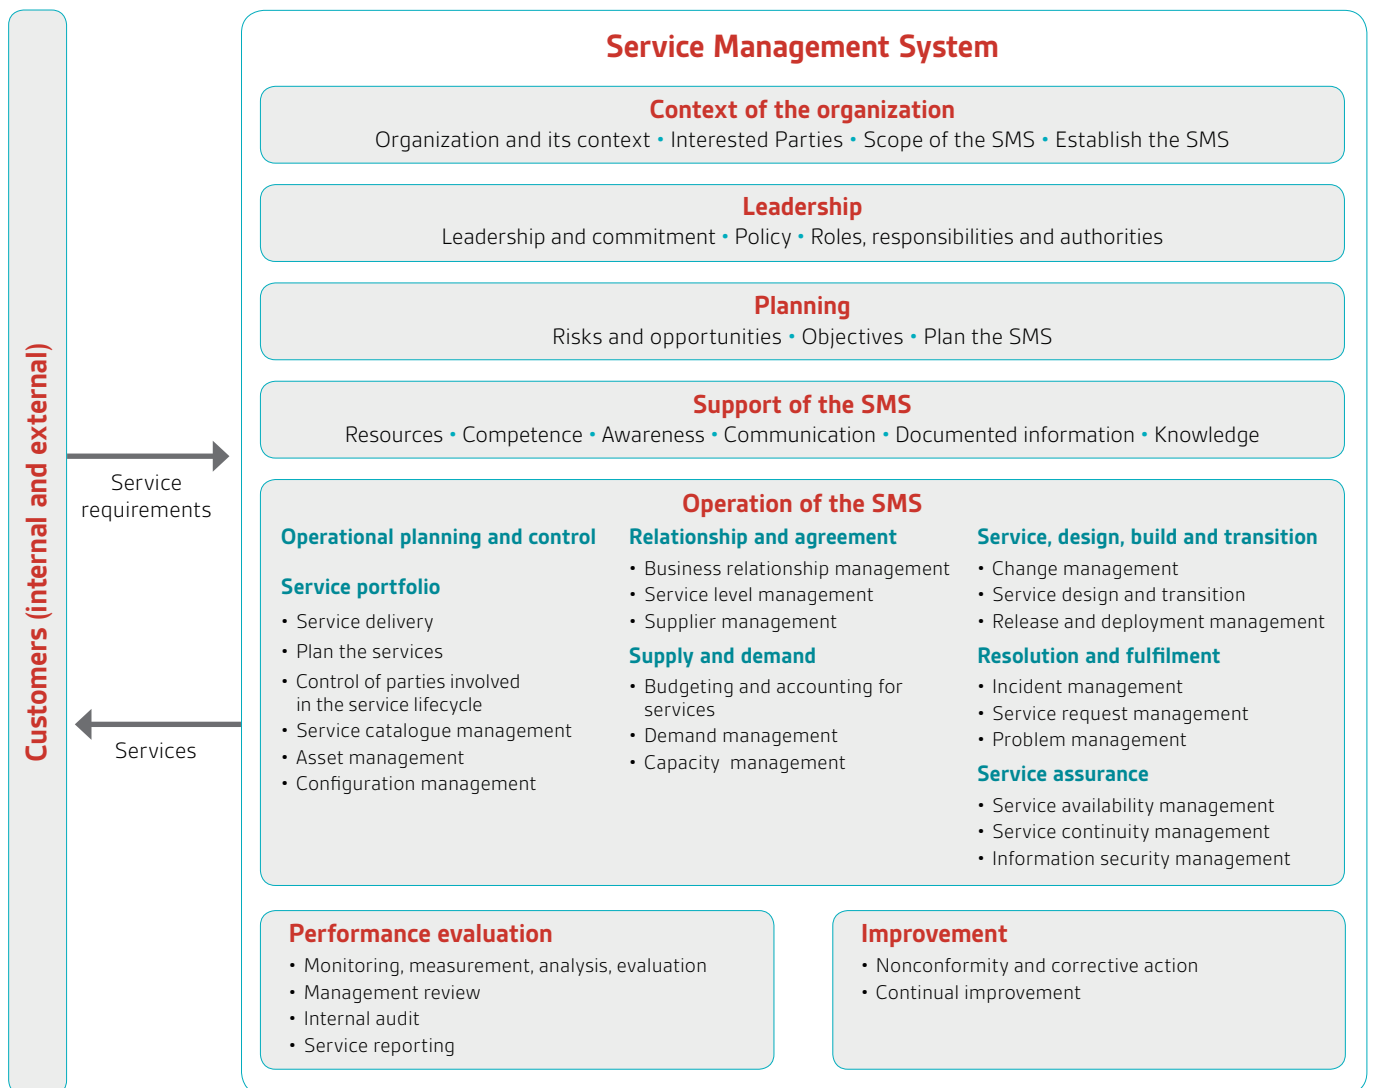

This document presents a mapping between the requirements of ISO/IEC 20000-1:2011 Service Management System (SMS) and ISO/IEC FDIS 20000-1. It has been designed for guidance purposes only and provides the following:

1. An overview of the key changes and additions to the ISO/IEC 20000-1 requirements
2. A mapping between requirements in ISO/IEC 20000-1:2011 and ISO/IEC FDIS 20000-1
3. The reverse mapping

The mapping tables are designed to help you further investigate the degree of correspondence between the two versions of the standard and the different ways they express the requirements.

## Figure 1: The Service Management System (SMS)

This looks more detailed than the previous version, because many of the processes have been separated and some new ones added.

# Comparing ISO/IEC FDIS 20000-1 with ISO/IEC 20000-1:2011

## Overview of new and updated concepts in ISO/IEC FDIS 20000-1

ISO/IEC FDIS 20000-1 is based on Annex SL – the new ISO high-level structure (HLS) that brings a common framework to all management systems. This helps to keep consistency and align different management system standards by providing matching sub-clauses within the high-level structure and applying common terminology across all standards.

The key changes made to the next edition are listed below:

New/updated concept	Comment
Context of the organization	A new clause from Annex SL which provides a greater understanding of the factors that can affect the organization, positively or negatively, and the interested parties (stakeholders) of the organization with their requirements for service management and the services.
New clauses	Requirements have been added for Plan the services and Knowledge. Annex SL has also led to requirements for Planning to achieve objectives being added.
Significant updates	No clauses have been deleted but some requirements from clauses in the 2011 edition have been moved to clauses with new titles.  Some clauses have significant updates - Actions to address risks and opportunities; Establish objectives; Communication; Monitoring, measurement, analysis and evaluation; Nonconformity and corrective action. The 2011 edition clause 'Governance of processes operated by other parties' has significant updates and has been renamed as 'Control of parties involved in the service lifecycle.'
Simplified clauses	Many clauses have been simplified to concentrate on what to do, rather than details about how to carry out the requirements e.g. the Budgeting and accounting for services process has been considerably simplified.
Separated combined clauses	Clauses that were previously combined for Incident management, Service request management, Service continuity management, Service availability management, Service level management, Service catalogue management, Capacity management and Demand management have now been separated into individual clauses.
Documented information and procedures	Reduction in the number of required documents. Less prescriptive e.g. documented availability and capacity plans have been replaced with requirements to agree service availability requirements and targets and to plan for capacity.
Service reporting	The requirements to produce the actual reports are now embedded within relevant sub-clauses in FDIS 8, 9 and 10.  FDIS Clause 9.4 has the high-level requirements for reporting in general.
Service provider	Replaced by Organization which is used across all standards using Annex SL.
Internal group	Replaced by Internal supplier; As a result of this, the term Supplier has been replaced by External supplier.
Configuration Management Database (CMBD)	Replaced by Configuration information.
Information security definition	Aligned with the definition in ISO/IEC 27000 to enable integration with ISO/IEC 27001. As a result of this, Availability has changed to Service availability.

# Making the transition

**Table 1: Clause cross reference from ISO/IEC 20000-1:2011 to ISO/IEC FDIS 20000-1**

This is useful if you are considering a transition project from ISO/IEC 20000-1:2011 to the new version.

ISO/IEC 20000-1:2011		ISO/IEC FDIS 20000-1:2018

# Preparing for ISO/IEC 20000-1 revision

The publication of the revised edition of ISO/IEC 20000-1 is expected in Q3 2018. ISO/IEC 20000-1:2011 will be withdrawn at the end of the expected 2 year transition period allowed for organizations already certified to ISO/IEC 20000-1:2011.

## Your Journey

BSI has identified a step-by-step journey to help you understand and realize the benefits of ISO/IEC 20000-1. We have mapped out a framework which guides you through the options and support available from BSI to ensure you have the knowledge and information you require.

**1. Buy a copy of the Final Draft International Standard (FDIS) and/or the International Standard on publication.**

This will help you become familiar with the new requirements, terminology and layout

**2. Visit the BSI website to access the most up-to-date support material available at [bsigroup.com](http://bsigroup.com) which can help you understand the changes**

**3. Consider further services to help implement the changes.** BSI will offer a full range of services including GAP assessments and Entropy™ software to help you manage your systems

# Why BSI?

BSI has been at the forefront of ISO/IEC 20000 since the start. Originally based on BS 15000, developed by BSI in 2000, we've been involved in its development and the ISO technical committee ever since. That's why we're best placed to help you understand the standard.

At BSI we create excellence by driving the success of our clients through standards. We help organizations to embed resilience, helping them to grow sustainably, adapt to change, and prosper for the long term. We make excellence a habit.

For over a century our experts have been challenging mediocrity and complacency to help embed excellence into the way people and products work. With 80,000 clients in 182 countries, BSI is an organization whose standards inspire excellence across the globe.

## Our products and services

We provide a unique combination of complementary products and services, managed through our three business streams; Knowledge, Assurance and Compliance.

### Knowledge

The core of our business centres on the knowledge that we create and impart to our clients. In the standards arena we continue to build our reputation as an expert body, bringing together experts from industry to shape standards at local, regional and international levels. In fact, BSI originally created eight of the world's top 10 management system standards.

### Assurance

Independent assessment of the conformity of a process or product to a particular standard ensures that our clients perform to a high level of excellence. We train our clients in world-class implementation and auditing techniques to ensure they maximize the benefits of the standards.

### Compliance

To experience real, long-term benefits, our clients need to ensure ongoing compliance to a regulation, market need or standard so that it becomes an embedded habit. We provide a range of services and differentiated management tools which help facilitate this process.
