

## BSI Training Academy

# ISO 45001 Migration and Implementing Changes training course

### Essential information about the course

Level 

ISO 45001 is the world's first ISO management system standard for Occupational Health and Safety (OH&S). Its focus on risk prevention, innovation and continual improvement will benefit organizations with the foresight to achieve this global standard through increased organizational resilience. Suitable for organizations large or small and in any industry, it will replace the widely implemented BS OHSAS 18001.

If you are involved in the planning, implementing or supervising of an ISO 45001 management system, then this course will help you understand and recognize the key differences between BS OHSAS 18001 and ISO 45001 from an implementation perspective. You should already be familiar with BS OHSAS 18001 and by attending you'll be able to identify gaps in your current system ahead of migrating to ISO 45001.

Our expert tutors will ensure you understand the new ISO high level structure that now applies to all new management system standards, particularly new requirements relating to Context, Leadership, Planning, Support and Operation. You will learn what implementation of ISO 45001 could look like through examples which will be provided in a useful toolkit. This course will also show you how to create an action plan so that you can implement the new standard using good practice guidance.

This two day course is packed with practical activities, group discussion and classroom learning to help you retain the knowledge to implement an effective ISO 45001 OH&S MS. Our expert tutors will make sure you complete the course feeling confident that you can apply your new knowledge as soon as you step back inside your organization.

Upon successful completion of your course, you'll receive an internationally recognized BSI certificate.

# ISO 45001 Migration and Implementing Changes training course

Our full course agenda helps you understand what to expect:
