

## Road to Improve Occupational Health and Safety and Energy Management

**6 June 2019 (Thursday)**

The Business Continuity Institute (BCI) has published the Horizon Scan report 2019 by conducting an online survey with continuity and resilience professionals to gain insight on the biggest threats and disruptions to organizations. The report highlights that Health and safety incidents was the second biggest and the costliest disruption in the past 12 months.

Don't let health and safety incidents be the biggest disruption in 2019 - embed a people-centred approach, one that will help make your organization more resilient with **ISO 45001** Occupational Health and Safety Management System:

- health and safety becomes part of strategic delivery of business
- focus on the culture of the organization – one that encourage worker participation, increasing morale
- Get leadership buy-in and make your organization an attractive workplace

On the other hand, energy is a critical component in most organization's operations and one that has major cost implications. Working to reduce these costs can have a big impact on an organization's bottom line. **ISO 50001** Energy Management System, an international standard outlining the best management practices for achieving energy efficiency, can help you achieve these savings for your organization.

Join our **FREE Seminar** to learn these standards!
