e-Discovery

e-Discovery 101

A Definition

Electronic discovery (also e-discovery or ediscovery) refers to discovery in legal proceedings such as litigation, government investigations, or Freedom of Information Act requests, where the information sought is in electronic format (often referred to as electronically stored information or ESI). Electronic discovery is subject to rules of civil procedure and agreed-upon processes, often involving review for privilege and relevance before data are turned over to the requesting party.

Relativity

Once upon a time on an old green couch...

THE COUCH.

We built our business on this couch.

We bought it for barely five bucks at a garage sale so we would have something comfortable to sit on. It has been a bank, a break room, a waiting room, a drink table, and even an owner's desk. The couch was also in many of our early conference rooms and has provided a handful of out-of-office-of-hours, all-night, overtime sessions, and late night shuttling parties. It is as integral in Relativity history as any person.

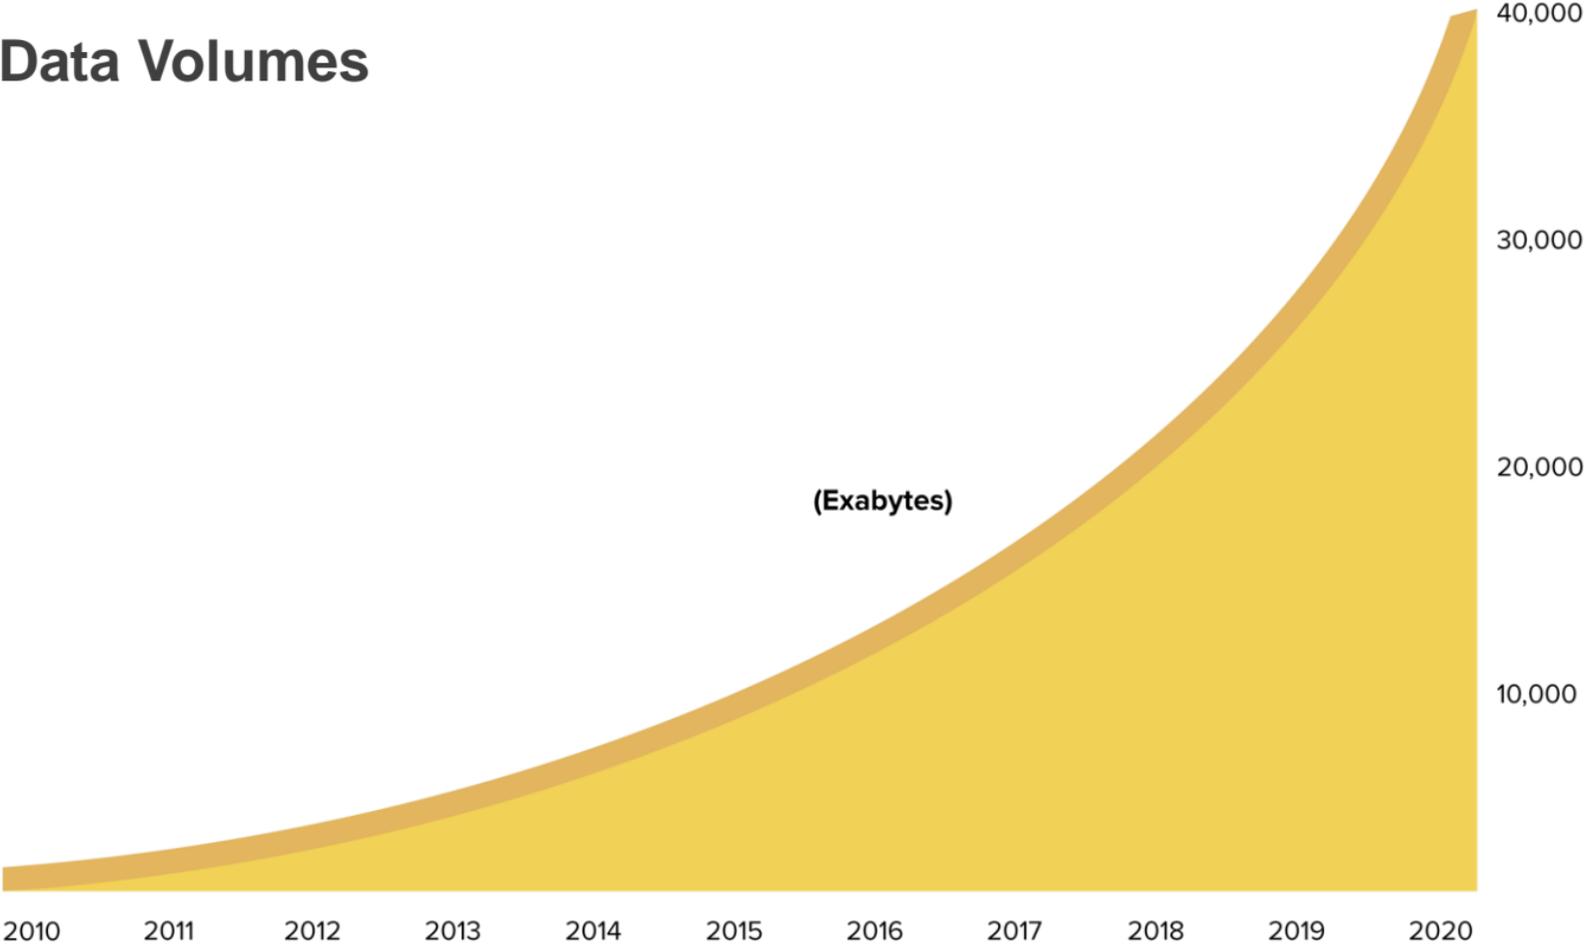

Our business models have changed, the desks have been replaced, and the computers have been upgraded, but the couch is still here.

 Relativity

Data

Big Data Volumes

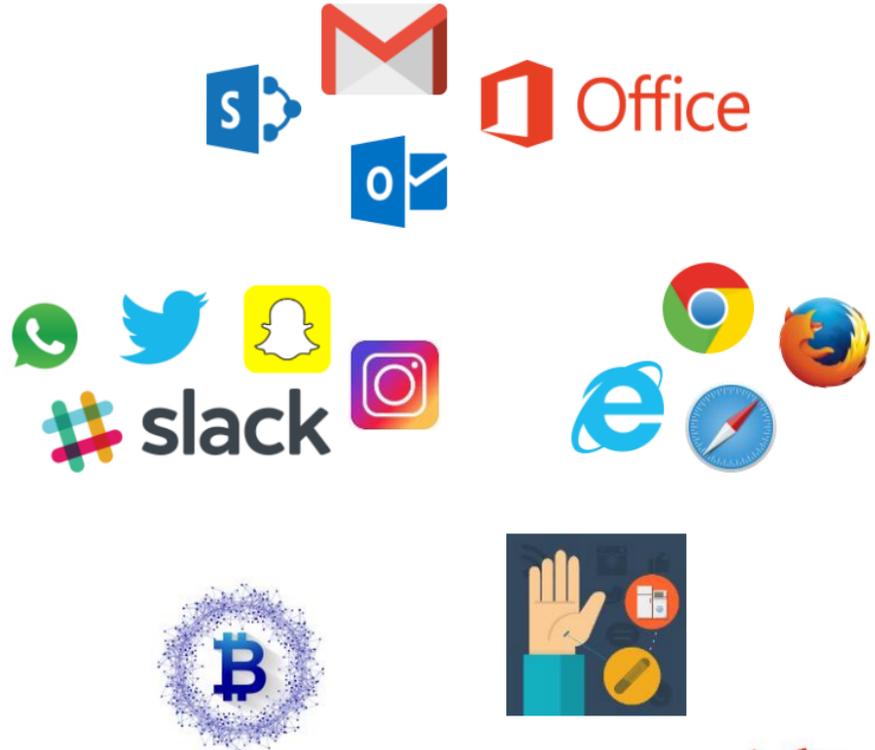

Data Types

- Real world data
 - Collected hard-copy material
 - Search and seizures
- 'Traditional' electronic data
 - Servers
 - Desktop machines
 - Laptops
 - Portable devices

Data Types

- Cloud data and beyond
 - SharePoint
 - Online email services
 - Messaging services
 - Transient data
- Internet of Things
 - Google Home, Amazon Alexa
 - Smart devices
 - Wearable technologies
- Internet of 'Bodies'
 - Microchips
 - Pace makers, Insulin pumps
- Blockchain

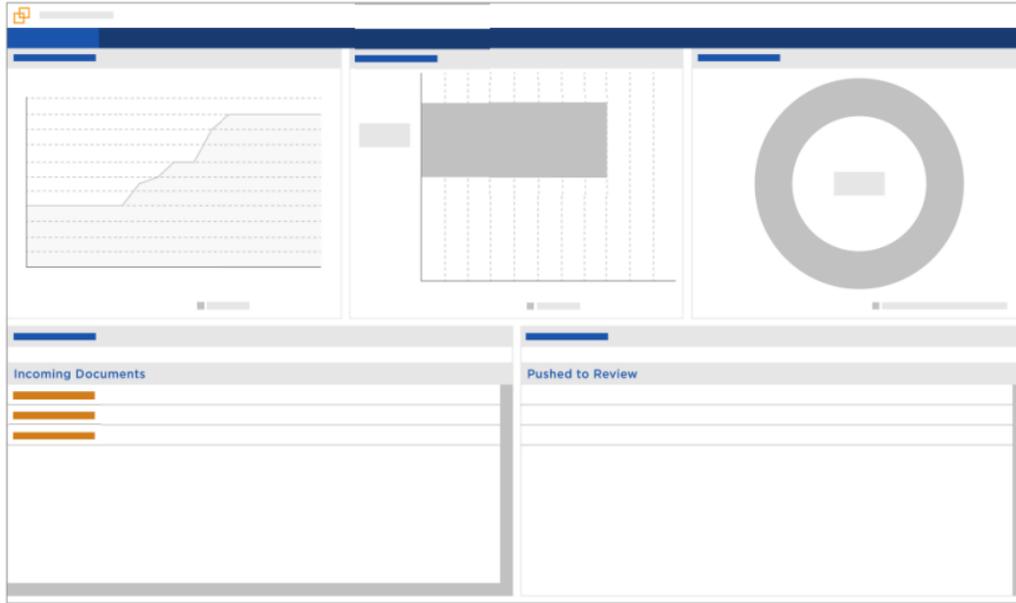

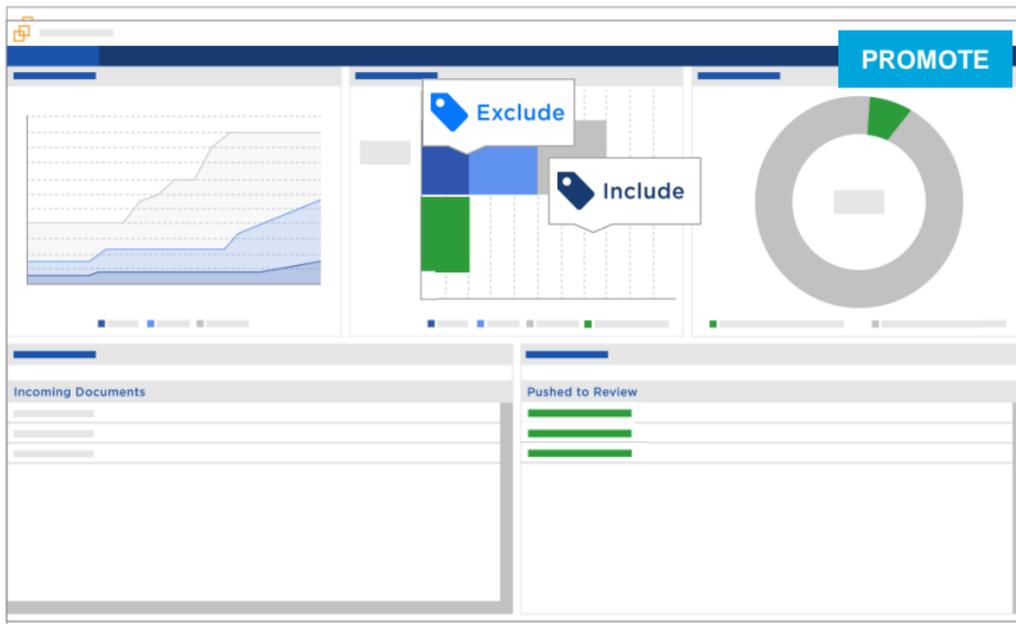

Early Case Assessment

ECA and Investigation

Early Case Assessment and Investigation

- Early Case Assessment
 - Quickly analyze and synthesize evidence from multiple sources to cull your data, assess the overarching facts, and determine case strategy.
- Investigation
 - Conduct swift and powerful digital investigations using a forensically sound process. Explore your data, collaborate, and act on what you find.
- Benefits of using ECA & Investigation
 - Leverage analytics at any point.
 - Flexible approaches to your work.
 - Easily move your data within Relativity.
 - Reuse your work product.

Adventures in Analytics

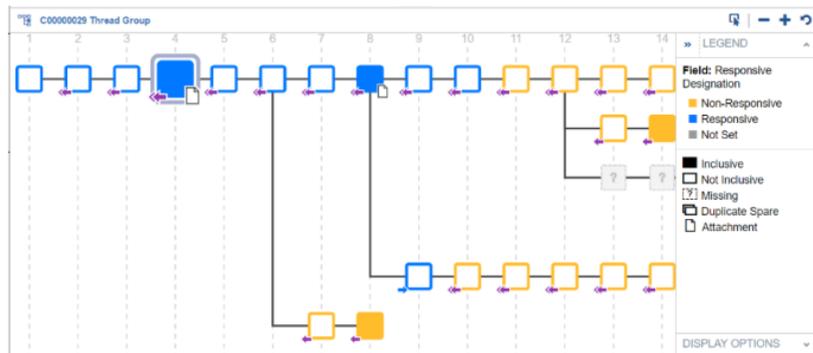

Structured, Conceptual, and Active Learning

Structured Analytics

- Based on structural analysis of the text according to defined properties
 - Email Threading
 - Language Identification
 - Name Normalisation
 - Text Near Duplicate Identification
- Benefits of Structured Analytics
 - Organize documents for more consistency and efficiency
 - QC on like documents with dissimilar coding
 - Reduce document populations through analytics

Email Thread Visualization

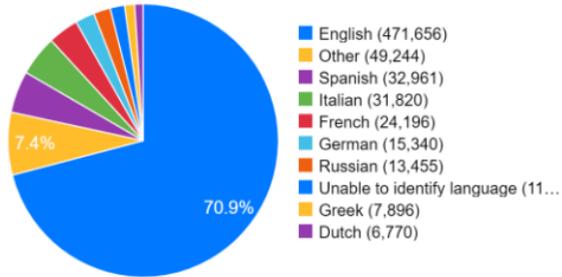

- Understand the “story” of an email thread
- Easily navigate to other emails in the thread
- View coding highlights to visually identify coding decisions
- Make faster, more consistent coding decisions
- Easily identify missing emails
- Visually QC coding decisions

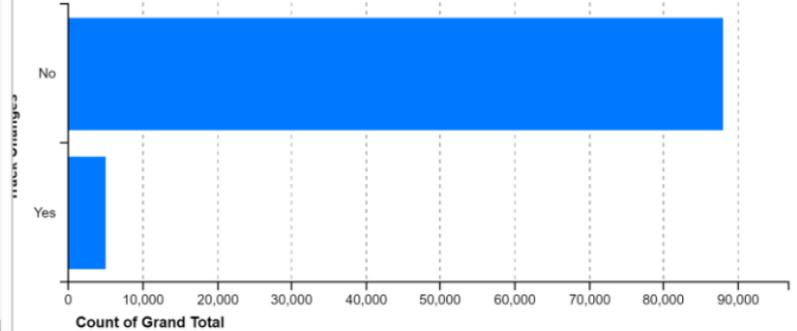

Language Identification

Communication Analysis

Analytics is all around you!

Conceptual Analytics

- Conceptual Analytics is a mathematical approach (LSI) used to index documents.
- Matches between documents are determined based on the words in the given document set.
 - No outside word lists needed (dictionaries, thesauri, etc.)
 - Language-agnostic
 - Relies on term co-occurrence, not term location
- Conceptual Analytic options
 - Keyword Expansion
 - Concept Search
 - Find Similar Documents
 - Clustering

Keyword Expansion

- A searching method that finds how different language is used to express identical or conceptually similar concepts and terms in an index.
 - Investigate a large unknown dataset.
 - Find key search terms for a case.
 - Uncover unknown information based on information already known to be relevant.

Conceptual Keyword Expansion

electricity Expand

0 Selected Item(s) ↔ X 🔍 🔄 📄

<input type="checkbox"/> Keyword	Rank
<input type="checkbox"/> (All)	<input type="checkbox"/> (All)

<input type="checkbox"/> california's	
<input type="checkbox"/> deregulation	
<input type="checkbox"/> megawatt	
<input type="checkbox"/> utility	
<input type="checkbox"/> power	

Copy Selected Keywords

Finding Similar Documents/Concept Search

- Searches using a sentence, paragraph, or entire document.
- Returns documents related to the concept of the query.
 - Find documents even if terms differ.
 - Searching for documents based on ideas instead of absolutes.
 - More natural querying.

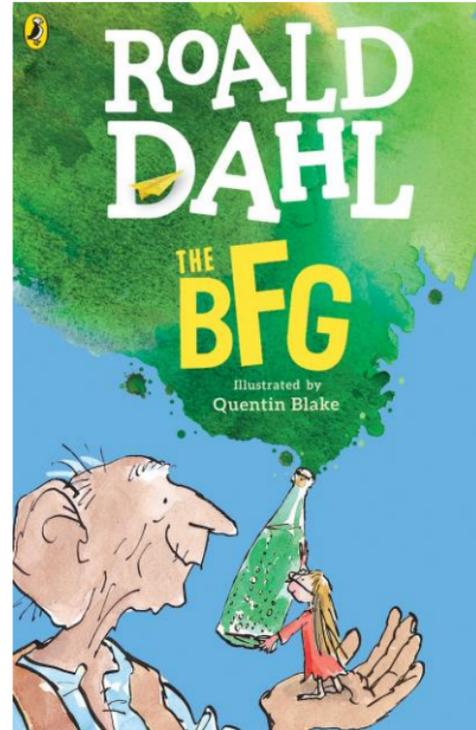

Value of concept search

- Avoids term mismatch issues
 - Pop vs. soda
 - Football vs. soccer
- Avoids intentionally confusing use of language
 - Code words
- Finds documents even if exact language differs
 - Misspellings
 - Synonyms

Concept Searching

- There are giants in the book.
- A child is stolen.
- It happens in England and they meet the Queen.
- There is something to do with dreams.
- Author is famous for writing children's books

Clustering

- Use the power of the conceptual index to identify groups of conceptually related documents.
 - Investigate a large unknown dataset.
 - Deprioritize non-relevant documents quickly.
 - Speed up a linear review by batching conceptually related documents together.

This genre is closely associated with the thriller and adventure genres, and they may also contain elements of spy fiction.

1. (Index Search)

Analytics
Action film is a film genre in which the protagonist or protagonists are thrust into a series of challenges that typically include violence, extended fighting, physical feats, and frantic chases. Action films tend to feature a resourceful hero struggling against incredible odds, which include life-threatening situations, a villain, or a pursuit which usually concludes in victory for the hero (though a small number of films in this genre have ended in victory for the villain instead). Advancements in CGI have made it cheaper and easier to create action sequences and other visual effects that required the efforts of professional stunt crews in the past. However, reactions to action films containing significant amounts of CGI have been mixed, as films that use computer animations to create unrealistic, highly unbelievable events are often met with criticism.[1] While action has long been a recurring component in films, the "action film" genre began to develop in the 1970s along with the increase of stunts and special effects. Common action scenes in films are generally, but not limited to, car chases, fighting and gunplay or shootouts.

This genre is closely associated with the thriller and adventure genres, and they may also contain elements of spy fiction.

Active Learning

High-Level Active Learning Process

- As reviewers code documents via Active Learning, the system learns what sort of documents are likely to be responsive.
- The system then serves those documents likely to be responsive to reviewers.
- Decisions made on those documents are used to refine the model, and serve up better and better documents.
- This significantly accelerates the review process, as reviewers are shown the most potentially relevant documents first, while irrelevant documents are suppressed from review.

Prioritized Review Queue Workflow

- Create a local list of the most relevant documents
 - Index health
 - No previously reviewed documents
 - No duplicates
- Reviewers code and submit documents.
- Model updates and the list is refreshed.

Going beyond e-Discovery

Relativity[®] Trace

- ✓ Helps financial service and other regulated organizations identify non-compliant or high risk behavior in their organizations
- ✓ Proactive compliance, monitoring, and surveillance
- ✓ Rules engine flags and tags relevant content for reviewers
- ✓ Automated ingestion and searching

Relativity[®] Trace

Surveillance and Compliance Monitoring:

There are numerous opportunities within the space.

Trader Surveillance

- Insider trading
- Collusion and price fixing
- Market manipulation
- Front-running
- Anti-money laundering

Investment Management Compliance

- Providing advice or recommendations that do not meet suitability or fiduciary standards
- Overstating the performance or minimizing the risk of a financial product

General Monitoring

- Bribery and Corruption (FCPA)
- Improper gifts or kickbacks (pharmaceuticals, general)
- Distribution of confidential information outside of your organization
- Use of offensive language
- Call center monitoring
