

EN 1090-1 CE marking for structural steel and aluminium

Customer application form

How ready are you for EN 1090-1?

To comply with the requirements of the Construction Products Regulation (CPR), the deadline for the mandatory CE marking of structural steel and aluminium is 1st July 2014. This means that compliance with EN 1090-1 will become mandatory for all fabricators involved in structural steelwork and aluminium. After this date it will be illegal to trade fabricated steelwork and aluminium, and related products on the European market without CE marking.

This questionnaire helps us to understand your business and provide you with the best possible service to help you to get Factory Production Control to EN1090-1. Your co-operation in completing all sections is appreciated.

When you have completed this, please save your file and email back to product.certification@bsigroup.com or directly to your sales contact at BSI.

Information provided will not be disclosed and will be destroyed immediately after use.
