

BSI Catering Food Safety Certification

BSI Catering Food Safety Certification is a unique, global standard specifically developed by BSI to meet an industry need for appropriate food safety criteria relevant to food prepared for immediate consumption. There are many food safety standards and certifications available however the majority of these have been written for food manufacturing and it's not one size fits all in the food industry.

Based on the internationally recognised requirements of ISO TS 22002-2:2013 Pre-Requisite Programs on Food Safety and ISO 22000:2005, Food Safety Management Systems, with references to Codex Alimentarius HACCP, this certification covers the essentials for:

- Prerequisite programs
- HACCP food safety plans
- Process controls
- Document and record keeping

Whether you're looking for a standard to guide your business for compliance and consistence of operations or for recognition of your commitment to food safety management systems, we can provide the certification to meet your unique needs.

BSI Catering Food Safety Certification is a user-friendly standard with clear and concise requirements to give your catering or foodservice business a framework to manage food safety risks. It has everything that you need to do and nothing that you don't, with foodservice rather than manufacturing language. This standard is ideal for cook-fresh businesses that prepare food for immediate consumption including:

- Caterers (on-site or mobile)
- Restaurants
- Hotel kitchens
- Hospital kitchens
- Care facility kitchens
- Schools and universities
- Food trucks

Organizations that gain BSI Catering Food Safety Certification can promote their commitment to safe food preparation and handling by using this mark on promotional materials, online, secondary packaging, menus, delivery vehicles and more.

Benefits of adoption

Certification to this standard demonstrates your commitment to a preventive hazard and risk based food safety management system with the added benefits of:

- Recognition for implementation of a food safety management system based on globally recognized HACCP and ISO based food safety programs
- Regulatory compliance which is fundamental to comply with local food safety legislation
- Providing a systematic methodology to effectively identify and manage food safety risks from process interactions which are especially relevant for foods that are cooked and served for immediate consumption
- Improved employee engagement through increased awareness of food risks and promotion of safety
- Showing your commitment to food safety, providing confidence to your customers

BSI Catering Food Safety Certification takes a common sense, risk-based approach, providing organizations with a clear path towards achieving certification. This new standard has been especially designed to meet the gap in the current food safety standards between legal compliance and manufacturing based standards.

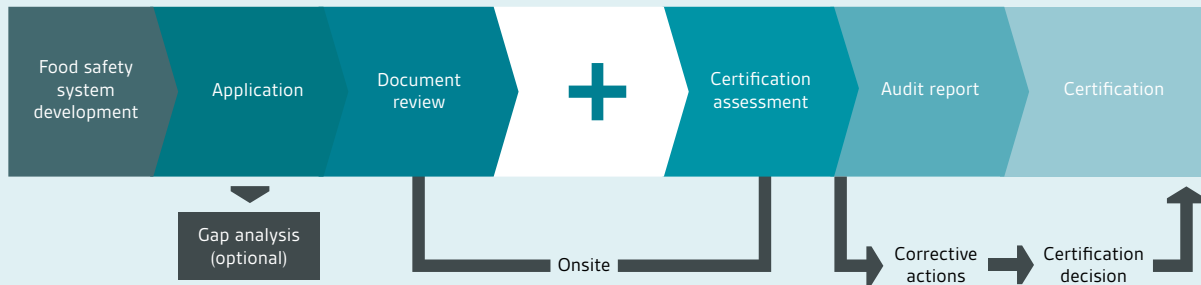

The journey to certification

The first step to certification to BSI Catering Food Safety Certification is to develop your food safety management system using the certification criteria and your local regulatory requirements as a guide to the level detail required in your documented system for a range of food safety related activities.

Whether you're ready for the next step in best practice food safety management or you're more concerned about meeting the requirements of your customers, BSI Catering Food Safety Certification can drive meaningful change in your organization. From an initial introduction to the standard through to training and

certification, no matter how far along you are, BSI can support your journey. Want to know more about the requirements of the standard, the steps to certification or how BSI is here to help?
