

Pharmaceutical Risk Management Consulting Services

Driving Continuous Improvement in security, safety, supplier management and quality for pharmaceutical companies

Pharmaceutical companies face a daunting array of risks to their operations, from managing complex supply chains to ensuring the safety of their patients and employees. The unique combination of strict regulatory concerns and outsourced manufacturing makes managing risk in a pharmaceutical company even more challenging.

BSI's consultants have experience helping pharmaceutical companies, both large and small, manage risks from their day-to-day operations through their supply chains. For rapidly growing, innovative pharmaceutical companies, BSI's consultants are uniquely suited to provide due diligence services across a wide range of business risks. Our risk management services include quality, supply chain risk management, health and safety, environmental, security gap assessments, and advisory support. BSI's Consulting Services help pharmaceutical companies make informed decisions, enabling operational resiliency, helping them to avoid costly disruptions and regulatory issues.

Why BSI for the pharmaceutical industry

BSI focuses on building sustainable, long-term risk management systems and giving our clients the tools and training needed to effectively assess and address both internal and external threats to the resilience of their operations. We enable businesses to proactively plan for and anticipate security incidents, natural disasters, human-caused interruptions, quality problems, and other disruptions that could compromise the security of their employees and customers, harm their reputation, and prevent them from serving their patients.

bsi. ...making excellence a habit.™

Manufacturing Quality management practices

BSI helps companies identify gaps in their good manufacturing practices, proactively mitigating risk before problems arise.

- Assess gaps in quality management systems to identify areas of higher risk
- Develop and implement plans to remediate quality risks
- Assist in developing quality management systems to bolster compliance

Deliver customized quality and good manufacturing process trainings

Supply chain risk management

BSI enables organizations to understand hidden risks in their supply chain and equips them to handle unforeseen disruptions.

- Map risk across the supply chain, from API manufacturers to distributors and sites of care
- Develop and implement plans to respond to, and remediate supply chain risks, including manufacturing, in-transit, and distribution-related risks

- Develop business impact analysis and business continuity plans
- Use BSI's Supplier Compliance Manager (SCM) and SCREEN tools to monitor supply chain risks
- Deliver customized supply chain security and compliance (CTPAT/AEO) trainings

Environmental, health and safety, and sustainability

BSI is an end-to-end provider of environmental, health and safety, and sustainability services, assisting clients with an array of issues.

- Assess gaps in EHS management systems
- Develop strategic plans for EHS and sustainability
- Provide management system support and program development
- Assist with lab safety, waste management, and industrial hygiene support
- Conduct security and workplace violence assessments
- Deliver customized EHS and sustainability trainings
