

A high-angle photograph of a construction worker wearing a red jumpsuit, a yellow hard hat, and a high-visibility yellow vest. The worker is kneeling on a dark, textured surface, possibly a construction site floor, and is holding a tablet computer with both hands, looking at the screen. The background shows vertical metal beams and a concrete wall. A large, semi-transparent red circle is overlaid on the bottom left of the image, containing the text.

The increasing complexity of jobsite health and safety documentation demands **innovative solutions**

BSI Construction Connect solution automates, organizes, and streamlines. With end-to-end digitization, and a robust analytics and visualization, BSI delivers a documentation management environment that's efficient, smart, comprehensive, and predictive.

- Issues are instantly visible
- Processes are automated
- Forms are standardized
- Documentation data is centralized
- And above all, binders, reams of paper, and endless filing are replaced with a portable, secure digital solution.

Informed Action

Monitor the status of tasks through a digital workflow

BSI Construction Connect	
Aerial Working Platform Inspection Checklist Due Date: 12:00:00 AM	
Item	Comment
Operator Name	Acme Inc.
Unit Type	Pneumatic
Lift ID Number	34847
Location	NE Corner
Operating and emergency controls are in proper working condition.	
Upper-drive control interlocks (foot pedal, spring lock or other interlocks) are functional.	
Emergency lowering function is functioning properly.	Pass
Lower operating controls override the upper controls.	Pass

Replace analog documentation with **digital workflows**

BSI's Construction Connect solution replace ad hoc analog documentation with best-in-class digital workflows, forms, and processes. Daily safety briefings, permitting documentation, inspection logging, or anything else safety-related is inefficient at best. Standardized and comprehensive digital forms ensure compliance you can trust.

Forms are selected via user-friendly drop-down menus, including All NYC DOB safety documents with the ability to create custom ones. Notes, checklists, and procedures are complete and standardized. Day-to-day safety document task tracking is monitored. Advanced visualization and dashboards highlight and flag issues—regardless of the size or complexity of the project. Consistent code-compliant work product is prepared across any organization of any size – in particular, organizations that have multi-project presence on a local, national, and international level.

Digitize your **safety documentation**

Change From	To
More than 30 different paper forms	Simplified digital drop down menus to select the forms required by job site
Variation in form completions	Consistent form completion (<i>fields may be marked mandatory/required</i>)
Manually collecting forms	Digitally submitted upon completion
Chasing down delayed or missed forms	Digital alerts the minute a deadline is missed for targeted follow up
Piles of disorganized notebooks and papers	Digitally organized files readily accessible via search
Copy and scan paper reports for distribution	Send reports digitally and print hard copy, if needed
Collecting the same data multiple times and manage manually (orientation)	Collecting the data once and pre-populating template forms for accuracy and efficiency
Wasting time to locate a completed form	Digital files readily accessible when needed
