

# Construction Services

Driving continuous improvement to enhance project efficiency and client value

Our construction support consultants bring their technical knowledge, expertise and resources to facilitate the delivery of your projects in a timely manner. With a strong culture in safety performance, we thrive to protect the project's bottom line.

With over 30 years of proven construction management and safety leadership, we provide project management, owner rep, site logistics management, construction safety management and oversight, safety engineering, training services, and on-site support to construction projects of all sizes.

Beyond compliance-based training, we also offer Injury Free Environment training and implementation, accident and incident investigation training, and training for field safety staff and managers.

Our consultants can offer a unique "turnkey" approach that manages all aspects of your project. We can augment your existing team, providing third-party over-sight and assessment of processes and programs on the construction site.

Our team of highly-skilled construction safety consultants is available to provide on-site support, in a full- or part-time capacity, to supplement existing staff or lead delivery of new construction safety initiatives – without investing in permanent headcount.
