CTPAT And AEO Advisory Services

Improving supply chain security through compliance

With over 50 years of supply chain security experience with government and commercial clients, our experts can help you gain and maintain certification for Customs-Trade Partnership Against Terrorism (CTPAT), Partners in Protection (PIP), EU Authorized Economic Operator (AEO) and other government programs.

BSI works with many government agencies involved in global supply chain security. Our history extends to our role as co-founders of the Transported Asset Protection Association (TAPA) and development of the first-ever certified global supply chain security standard, the Freight Security Requirements (FSR) and our work with the CTPAT program since its inception.

BSI CTPAT-Related Services

CTPAT has changed the Minimum Security Criteria that companies must meet to be accepted into or remain members of the program.

BSI is leveraging our expertise as intelligence providers to the CTPAT program and as a member of the working group for the new criteria, to help companies meet the new requirements and retain the important benefits of CTPAT. Our security experts bring years of risk mitigation and CTPAT program development experience and can help in the following ways:

• **Gap Assessments** - BSI's advisors will assess the current state of your CTPAT program and provide recommendations to achieve or maintain certification. Your company will walk away with a clear roadmap for implementing the changes needed to secure your supply chain.

• **Program Development** - BSI will develop the policies and procedures needed to comply with the new CTPAT requirements. Our advisors will work with your team to generate supply chain security policies, five-step risk assessments, and supplier oversight and monitoring programs

• **Training** - BSI's training courses cover all competencies required by CTPAT. Courses can be targeted towards management or operational employees and can be delivered in a variety of formats; from classroom and e-learning to hands-on training in the field.

• **Pre-Validation Assistance** - CTPAT validations require significant amounts of effort from all members of your CTPAT team, and BSI will help ensure that the entire process runs smoothly. BSI's pre-validation assistance includes a mock validation to prepare employees at the site and recommendations to handle issues that may occur during validation or re-validation.
