7. Summary of Certified Tonnage of FFB (Own Certified Scope)

Estate / Smallholders	Tonnage (MT) / year			
	Estimated last year (Oct 2022 – Sept 2023)	Actual (Jul 2022 – June 2023)		Forecast (Oct 2023 – Sept 2024)
		Previous license period (Jul 2022 – Sept 2022)	Current license period (Oct 2022 – June 2023)

Total	119,121.18	51,377.73		95,325.00

Despite adding the MB Module in the Scope of Certification, Bukit Benut Oil Mill still only processes FFBs from its owned supply bases (Bukit Benut Estate, and Lambak Elaeis Estate), and other SDP owned plantations/estates that are certified against the RSPO P&C.

In line with this operational framework, any RSPO Identity Preserved (IP) Certified Sustainable Palm Oil (CSPO) or RSPO IP Certified Sustainable Palm Kernel (CSPK) products are only downgraded to RSPO Mass Balance (MB) CSPO or RSPO MB CSPK after being loaded into the truck tank or truck trailer for transportation to the refinery or KCP, as determined by the Global Trading Marketing (GTM) Department.

Therefore, for the period of May 2024 – Sept 2024, the forecast volume as below:

Products	Forecast (May 2024 – Sept 2024)	
FFB	IP	95,324.00 MT

CSPO	IP	19,731.28 MT
	MB	1.00 MT
CSPK	IP	4,936.84 MT

Notes:

- (1) Low FFB processed and production resulting to low CPO and PK production due to low crop received supplying estate (Shortage of harvester, Increase of harvesting round, and interference of rainfall pattern). The forecast yield was verified and confirmed based on Sime Darby 2023 recruitment planning which will reduce harvester to area ratio and increase harvesting rounding, 2022 rain fall pattern and consideration of prime age of the OP for FFB sent to the Mill.
- (2) Despite adding the MB Module in the Scope of Certification, Bukit Benut Oil Mill still only processes FFBs from its owned supply bases (Bukit Benut Estate, and Lambak Elaeis Estate), and other SDP owned plantations/estates that are certified against the RSPO P&C.

BSI is a leading global provider of management systems assessment and certification, with more than 92,000 certified locations and clients in over 193 countries. BSI is the UK's National Standards Body. BSI provides independent, third-party certification of management systems. BSI is ASI Accredited (ASI-ACC-067) to conduct RSPO assessment since 31/10/2014 with accredited office located at Kuala Lumpur, Malaysia.

2.1 Assessment Methodology, Programme, Site Visits

The on-site assessment was conducted on **12/06/2023 – 15/06/2023**. The Critical NC close out on-site assessment was conducted on **21/08/2023**. With an extension of scope conducted on **15/02/2024**. The audit programme is included as Section 2.3.

The approach to the audit was to treat the mill and supply base as an RSPO Certification Unit. A range of occupational health and safety, environmental, best practice management, and social factors were covered. This includes consideration of topography, palm age, proximity to areas with HCVs, declared conservation areas, local communities engagement and workers welfare and safety.

The methodology for collection of objective evidence included physical site inspections, observation of tasks and processes, interviews of staff, workers and their families and external stakeholders, review of documentation and monitoring data. Malaysia National Interpretation 2019 of the RSPO P&C 2018 was used as the normative reference to assess compliance. The comments made by external stakeholders were also taken into account in the assessment.

The minimum sample size is four estates. Sample size for certification unit with more than four (4) estates were determined based on formula $N = (\sqrt{y}) \times (z)$ where y is the number of estates and where z is the multiplier defined by risk assessment. While, the sampling of smallholders were based on the formula $(\sqrt{y}) \times (z)$; where y is total number of group member and where z is the multiplier defined by the risk assessment. The sampled smallholder listed in Appendix E.

Meetings were held with stakeholders to seek their views on the performance of the certification unit with respect to the RSPO requirements and aspects where they considered that improvements could be made. At the start of each meeting, the interviewer explained the purpose of the audit followed by an evaluation of the relationship between the stakeholder and the company before discussions proceeded. The interviewer recorded comments made by stakeholders and these have been incorporated into the assessment findings.

RSPO P&C Public Summary Report

Revision 15 (Nov 2023)

Structured worker interviews with male and female workers and staff were held in private at the workplace in the mill and the estates. Fieldworkers were interviewed informally in small groups in the field. In addition, the wives of workers and staff were interviewed in informal group meetings at their housing. Separate visits were made to each of the local communities to meet with the village head and residents. Company officials were not present at any of the internal or external stakeholder interviews. A list of Stakeholders contacted is included as Section 3.4.

The non-conformities for this audit are detailed in Section 3.3 and unless it is stated in this section, all previous nonconformities including minor nonconformities are remains closed.

This report is structured to provide a summary of assessment finding as provided in Appendix A. The assessment was conducted based on risk based approach sampling and therefore nonconformities may exist.

For Initial, Re-certification and Extension of Scope assessment, the report was externally reviewed by approved external peer reviewer prior to certification decision by BSI.

For Annual surveillance assessment, the report was internally reviewed and approved by BSI qualified certification reviewer.

An Extension of Scope assessment was conducted on 15/02/2024. The objective is to verify the implementation of the certification unit's updated Supply Chain procedure therefore enable them to claim and classify their IP products as MB in the sales documents as well as in the RSPO PalmTrace platform.

The following table would be used to identify the locations to be audited each year in the 5 year cycle

Criterion 3.8: Supply chain requirement for mills (note: All supply chain requirements are considered as Critical (C) . However, it will not contribute to suspension if there is more than 5 non-compliance within a principle)			
3.8.1	Identity Preserved Module A mill is deemed to be Identity Preserved (IP) if the FFB processed by the mill are sourced from plantations/estates that are certified against the RSPO Principles and Criteria (RSPO P&C), or against the Group Certification scheme. Certification for CPO mills is necessary to verify the volumes and sources of certified FFB entering the mill, the implementation of any processing controls (for example, if physical separation is used), and volume sales of RSPO certified products. If a mill process certified and uncertified FFB without physically separating them, then only Mass Balance Module is applicable.	Refer Sustainable Supply Chain and Traceability for Upstream Malaysia ver. 01, dated May 2022 under section Glossary stated the meaning of RSPO Identity preserved as supply chain model assured that the RSPO certified oil palm product delivered to the end user uniquely identifiable to a single RSPO certified supply base. Refer document no. SD/SDP/GSD/SCCS/0522/01. FFB were obtained from all Sime Darby certified estates only. There was no third party's crop nor non-certified FFB received by the mill. This was verified during the stakeholders meeting and site visit at mill.	Complied
3.8.2	Mass Balance Module A mill is deemed to be Mass Balance (MB) if the mill process FFB from both RSPO certified and uncertified plantations/estates. A mill may be taking delivery of FFB from uncertified growers, in addition to those from its own and 3rd party certified supply base. In that scenario, the mill can claim only the volume of oil palm products produced from processing of the certified FFB as MB.	Bukit Benut POM is under Identity Preserved module. Thus, this indicator is not applicable. <u>Extension of Scope Assessment</u> The mill does not have any intention to accept and process any non-certified FFB, CPO or PK. All the FFB are supplied by its own certified supply base or other Sime Darby's certified estates on ad hoc basis. Thus, the palm oil content of its products is 100% IP-certified. This extension of scope assessment is conducted so that the mill can classify and sell its IP-certified CPO or PK as MB-certified. It does not imply that the mill has the capacity to receive	Complied

		non-certified FFB and produce MB module CPO/PK and IP module CPO/PK separately.											
3.8.3	The estimated tonnage of CPO and PK products that could potentially be produced by the certified mill shall be recorded by the certification body (CB) in the public summary of the P&C certification report. This figure represents the total volume of certified oil palm product (CPO and PK) that the certified mill is allowed to deliver in a year. The actual tonnage produced shall then be recorded in each subsequent annual surveillance report.	The estimated tonnage of CPO and PK products that could potentially be produced by the certified mill is recorded in this public summary report.
