Certified Information Security Manager (CISM®)

Course descriptive

Enhance your career with our Certified Information Security Manager (CISM) training course. With recent independent studies consistently ranking CISM as one of the highest paying and sought after IT certifications, it's a great course to help with your professional development. Plus, it provides executive management with assurance that you have the required experience to provide effective security management and consulting services.

Our accelerated 4-day course is designed to teach you the skills required to manage, design, oversee and assess and enterprise information security management program.

An authorized ISACA course is also designed to prepare candidates to sit and pass the ISACA CISM Certification exam to validate their skills and knowledge in Information Security Management.

The course is completed in 4 days and covers the following domains:

- Information Security Governance
- Information Risk Management and Compliance
- Information Security Program Development and Management
- Information Security Incident Management

Pedagogical objectives

This course and professional certification will provide you and your organization with a competitive advantage in the marketplace
- Provide business and enterprise with a deep understanding of the relationship and ensure alignment between information security programs and broader business goals and objectives while meeting the challenging need to integrate information security into business operations
- Understand how to establish and maintain the necessary frameworks that will ensure information security strategies are aligned with business objectives, and consistent with applicable laws and regulations
- Ensure the security and integrity of data and greater alignment between organizations' information security programs and their broader goals and objectives.
- Get the right mix of critical technology, business skills and experience. CISMs understand the true nature of security threats and how to respond quickly and appropriately
- Confidently identify and manage information security risks to achieve business objectives
- Be familiar with industry accepted terminology and practices used by information security professionals
- Gain the necessary knowledge and skills required in order prepare for the ISACA CISM exam

Skills to be acquired

After completing this course, participants should be able to:

- Explain the relationship between executive leadership, enterprise governance and information security governance.
- Outline the components used to build an information security strategy.
- Explain how the risk assessment process influences the information security strategy.
- Articulate the process and requirements used to develop an effective information risk response strategy.
- Describe the components of an effective information security program.
- Explain the process to build and maintain an enterprise information security program.
- Outline techniques used to assess the enterprise's ability and readiness to manage an information security incident.
- Outline methods to measure and improve response and recovery capabilities.
